Everyone

What this system is for

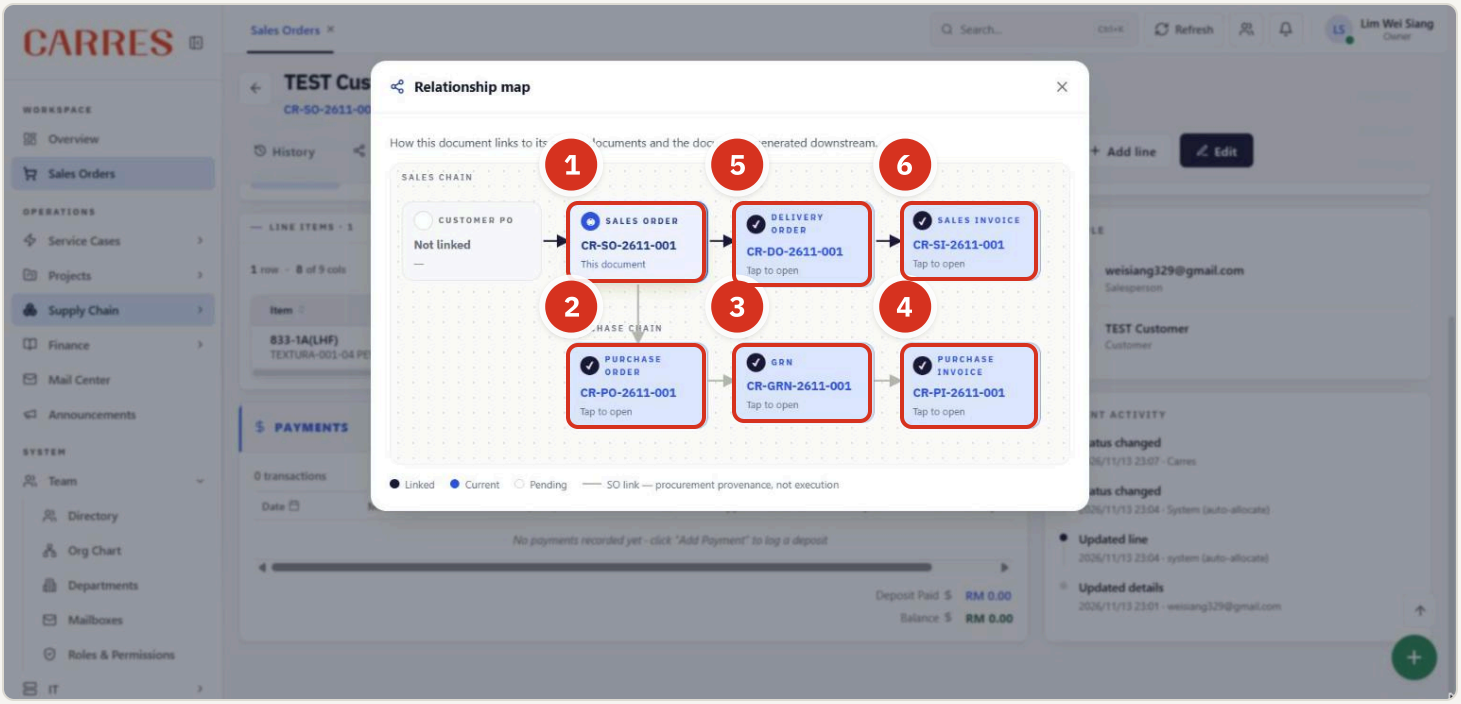

Carres sells furniture. A customer orders in a showroom, we buy the goods from a factory, they arrive at our warehouse, we deliver them to the customer's home, and we collect the money. This system links that whole road: every document knows where it came from and what comes next.

One customer order automatically leads to every document after it:

`Sales Order` → `MRP works out what to buy` → `PO to the factory` → `GRN goods received` → `PI supplier invoice`

`Sales Order` → `Delivery Planning` → `DO delivery order` → `Last Mile delivered` →

`SI sales invoice`

Any document › Relationship Map

1. This Sales Order (blue frame = the document you have open).
2. The Purchase Order raised from it (buying from the factory).
3. The GRN raised when the goods arrived at the warehouse.
4. The factory's Purchase Invoice.
5. The Delivery Order that takes the goods to the customer.
6. The Sales Invoice raised after delivery.

Lost track of where a document came from? Open it and press **Relationship Map**: the whole chain on one screen, and every box opens.

Everyone

Signing in and finding your way

There is one place to sign in: `erp.carresofficial.com/login`. Use the email and password the company gave you.

- If you open `carres-scm.pages.dev` while signed out, it takes you to that sign-in page by itself.

- After signing in, the menu is on the left: **Sales Orders**, **Supply Chain** (orders, buying, delivery, warehouse), **Service Cases**, **Finance**, **Team**. You only see the menus your position can use.
- Forgot your password: press **Forgot password** on the sign-in page.
- Something is wrong with the system: **IT Support** in the menu.

Every list works the same way

What you see	What it does
Status tabs at the top (ALL · DRAFT · SUBMITTED …)	Show one status only; the number is how many documents
Search box	Type a document number, customer name, phone or PO number
Columns	Choose which columns show; drag to reorder
Export	Download the list you are looking at as Excel
Press a row	A quick view opens on the right; press **Open full page** to see and edit everything
Dark button top right	Start a new document (New Sales Order, New Purchase Order …)
Transfer from …	Raise this document from the one before it; everything is copied, nothing to retype

Everyone

Words you will see

Word	Meaning
SO · Sales Order	The customer's order. Everything starts here
MRP	Looks at every SO and works out how much of each item is still short, and which supplier to buy it from
PO · Purchase Order	What we order from a supplier (factory)
GRN · Goods Received	Raised when goods arrive at the warehouse; this is what adds stock
PI · Purchase Invoice	The supplier's invoice: what we owe the supplier
DO · Delivery Order	What the driver delivers to the customer
SI · Sales Invoice	The invoice to the customer after delivery
SKU / Product Code	The code of each item, for example 5086-1A(RHF)
1A(LHF) / 1A(RHF) / 2A / CNR / L	Sofa pieces: one-seater with left arm, one-seater with right arm, two-seater, corner, L chaise
Combo	A sofa set (for example 3+2+1) and its cost for the whole set
Price 1–4	Sofa price columns by fabric grade: 1 and 2 = fabric, 3 = half leather, 4 = full leather
Fabric code	The fabric number, for example 311-01 WHITE. It decides which Price column is used
Binding	An SKU tied to a supplier: who we buy it from, the supplier's own code, the unit price
Showroom	Where the order was made (PJ Showroom, Kelana Jaya Showroom). Filled in from the salesperson
Sale Type	Outright (bought outright) or Subscription
Deposit 50%	Until the customer has paid half of the order, it cannot go into production

SET UP ONCE

Owner, management

Inviting staff, departments and positions

WHAT IT IS

The company's staff list, departments, positions and permissions

WHAT IT IS FOR

Everyone signs in with their own account and sees only the menus their work needs

WHO USES IT

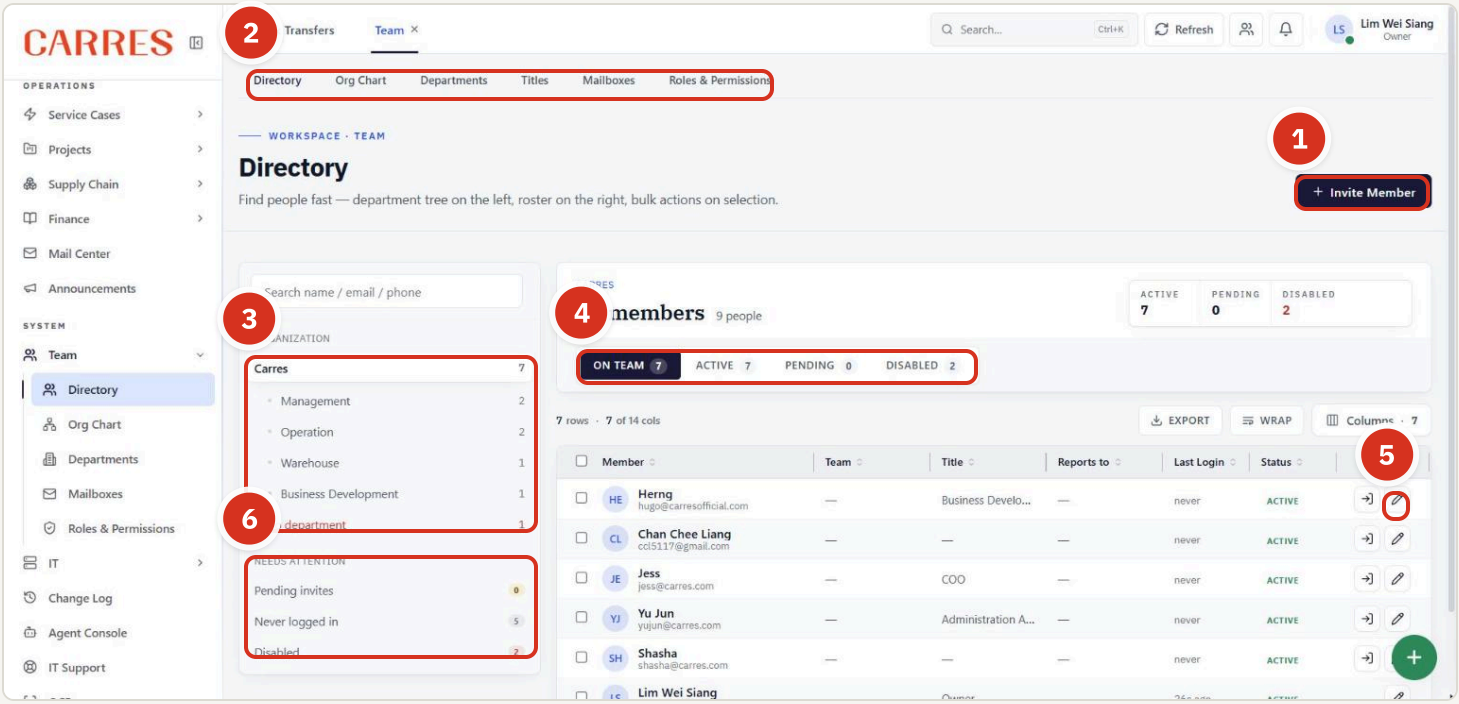

Owner, management

WHEN

When someone joins, changes department or leaves

PROBLEM IT SOLVES

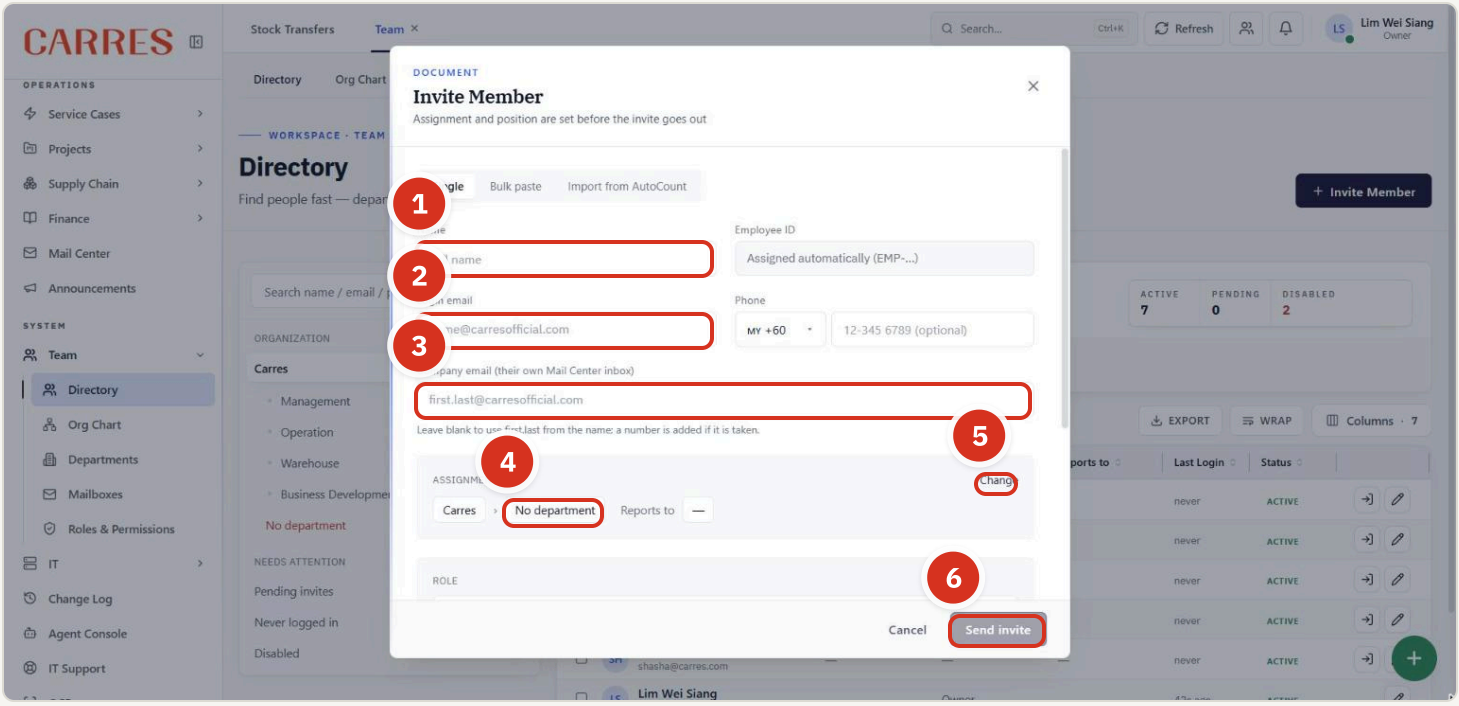

Shared accounts meant nobody knew who changed what. Now every action records who did it, and access follows the position.

Team › Directory

1. `Invite Member` invites a new member of staff.
2. Tabs: Directory (list), Org Chart, Departments, Titles, Roles & Permissions.
3. Department tree on the left: press a department to see only its people.
4. Status: On team, Active, Pending (invited, not signed in yet), Disabled.
5. Pencil: change this person's department, title, showroom or role.

6 Needs attention: people who have not accepted the invite, never signed in, or are disabled.

Invite Member (top half)

1 Name.

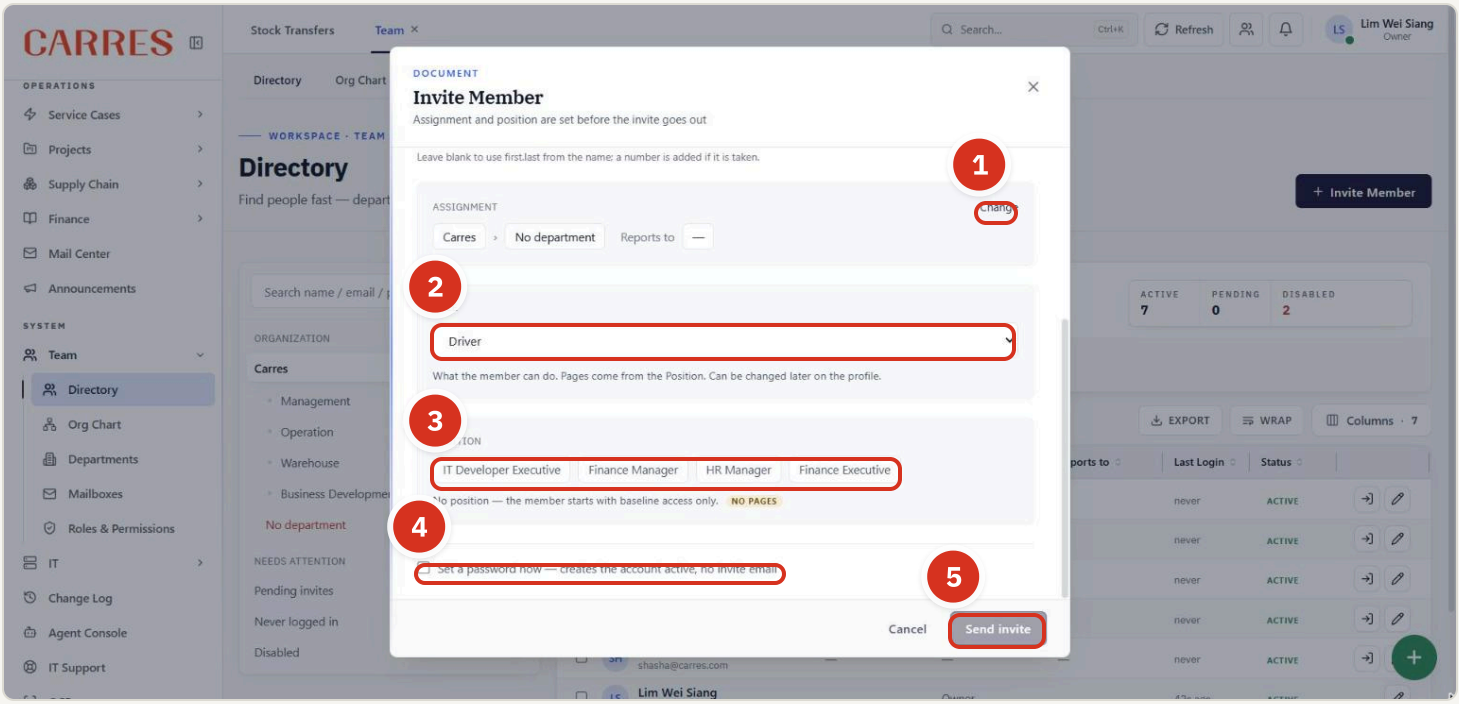

2 Login email: they sign in to `erp.carresofficial.com` with this.

3 Company email (for Mail Center). Leave it blank to use first.last@carresofficial.com.

4 Department: pick the department they belong to.

5 `Change` sets the company, department and who they report to.

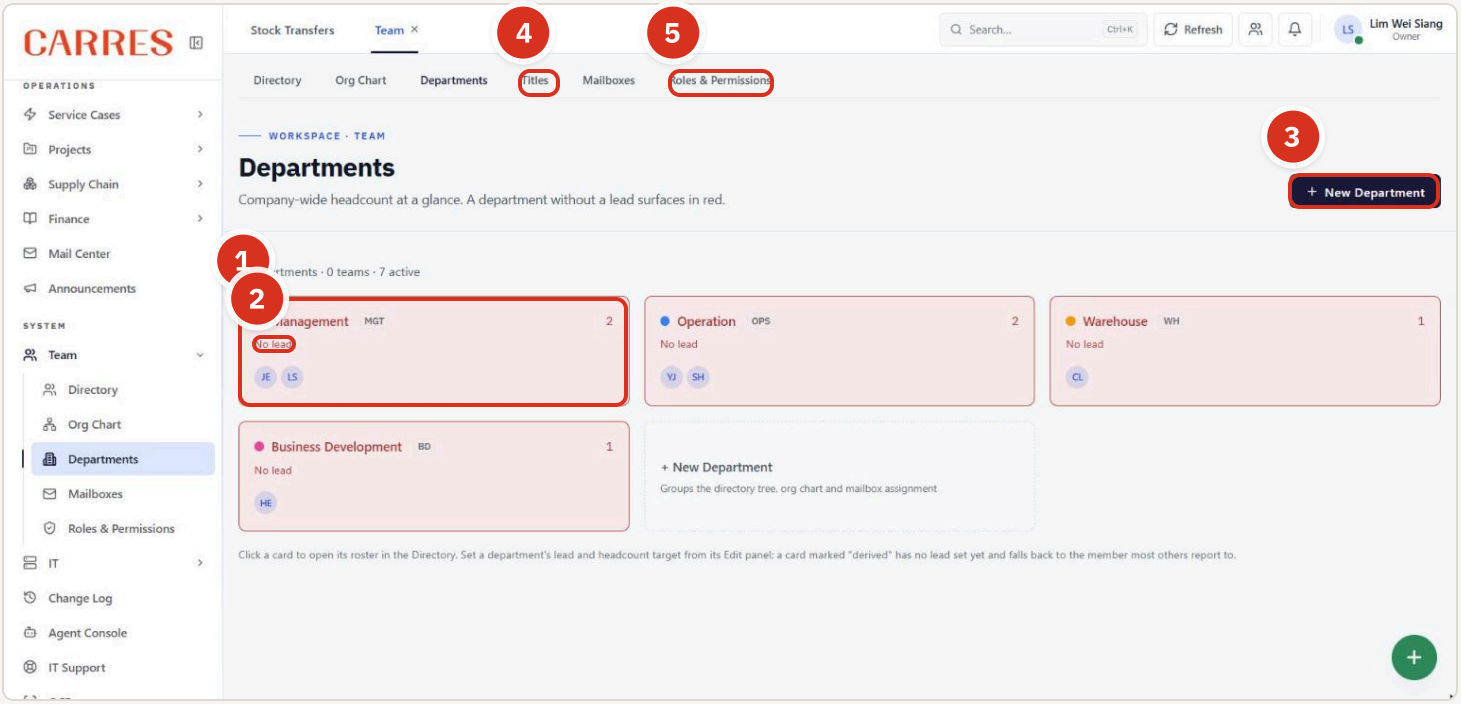

6 `Send invite` sends the invitation.

Invite Member (bottom half)

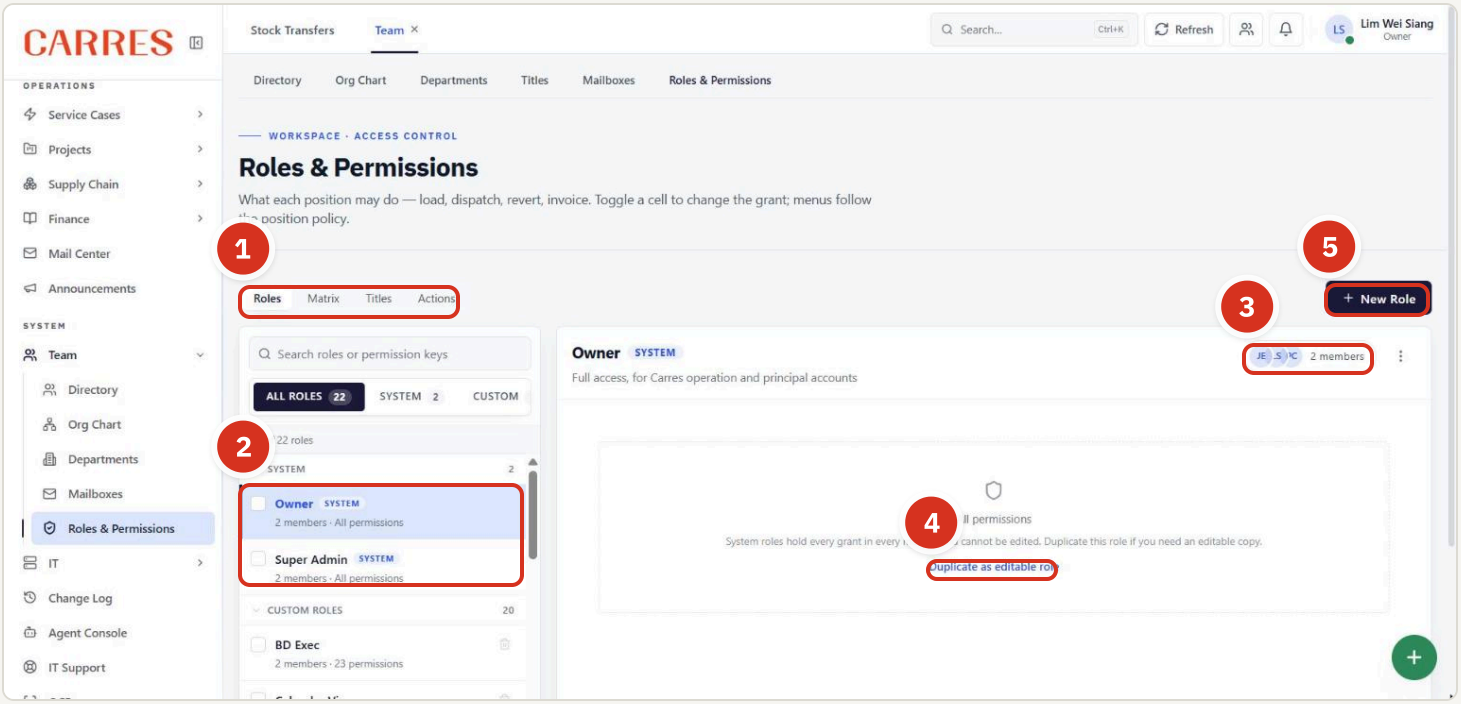

1. `Change` sets the department and who they report to.
2. Role: what they can do (for example Sales, Purchasing, Warehouse, Driver). **Always check it; the default is not always right.**
3. Position: decides which pages they see. No position = only the basic pages.
4. Tick **Set a password now**: you set the password yourself, the account works at once and no invite email is sent.
5. `Send invite` : the system also creates their portal login.

After the invite, the person gets an email to set a password. If it doesn't arrive, tick **Set a password now**, set one, and tell them in person.

Team › Departments

1. One card per department: Management, Operation, Warehouse, Business Development. The number is the headcount.
2. Red **No lead** = this department has no lead yet. Open the card to set one.
3. `New Department` creates a department.
4. Titles: job titles (COO, Administration Assistant ...).
5. Roles & Permissions: what each role may do.

Team › Roles & Permissions

1. Roles shows each role; Matrix shows every permission at once; Titles; Actions.
2. All roles on the left. Owner and Super Admin are system roles with every permission.
3. How many people have this role.
4. System roles cannot be edited; press **Duplicate as editable role** to make a copy you can change.
5. `New Role` creates a role.

Purchasing

Suppliers

WHAT IT IS

The companies we buy from

WHAT IT IS FOR

Every PO picks its supplier from here, so address, phone and contact are typed once

WHO USES IT

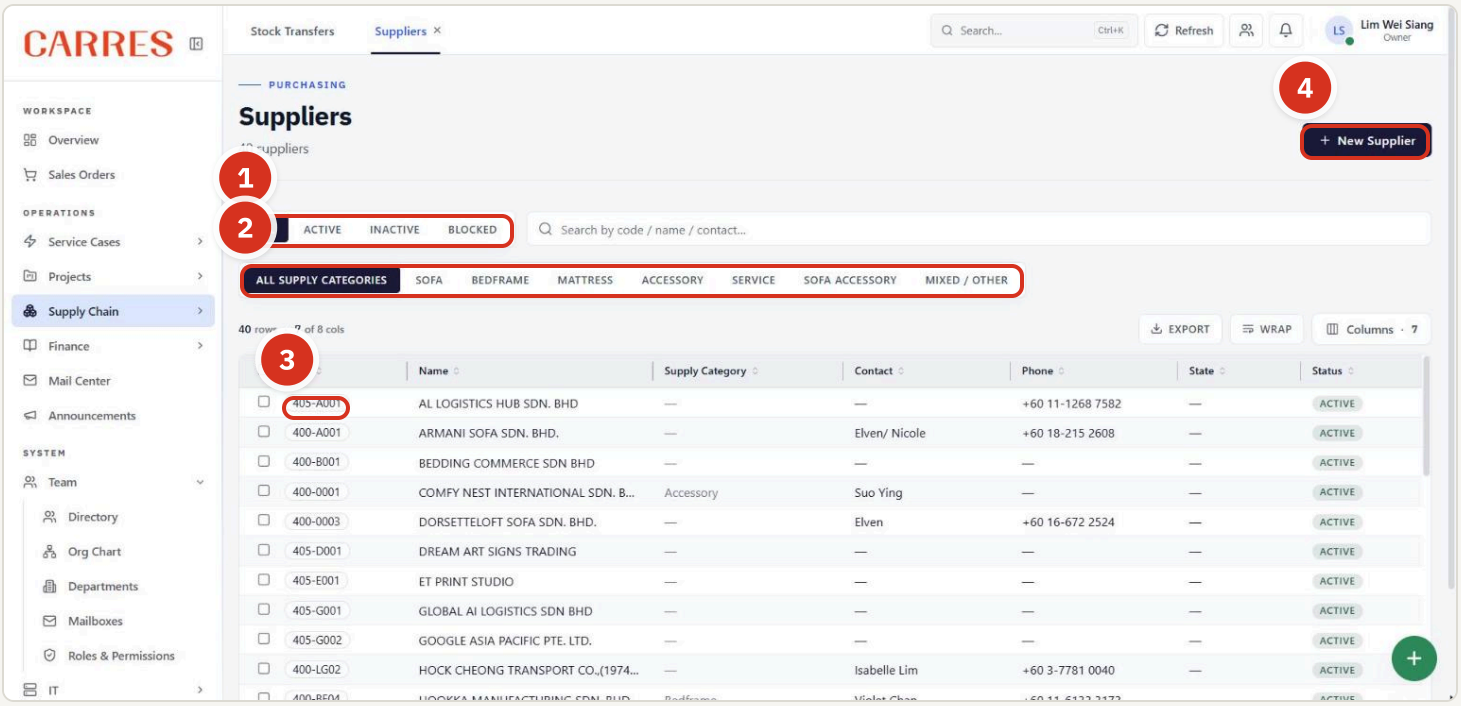

Purchasing

WHEN

When a new supplier comes in

PROBLEM IT SOLVES

Everyone typed supplier names their own way and orders went to the wrong place. Now each supplier has one code.

Supply Chain › Procurement › Suppliers

1. By status: Active, Inactive, Blocked.
2. By what they supply: Sofa, Bedframe, Mattress, Accessory, Service ...
3. Supplier code (for example 400-A001). Press a row to open and edit it.
4. `New Supplier` adds a supplier.

Purchasing

Products: SKUs and supplier binding

WHAT IT IS

Every item we sell (SKU)

WHAT IT IS FOR

SO lines, MRP and POs all take their data from here

WHO USES IT

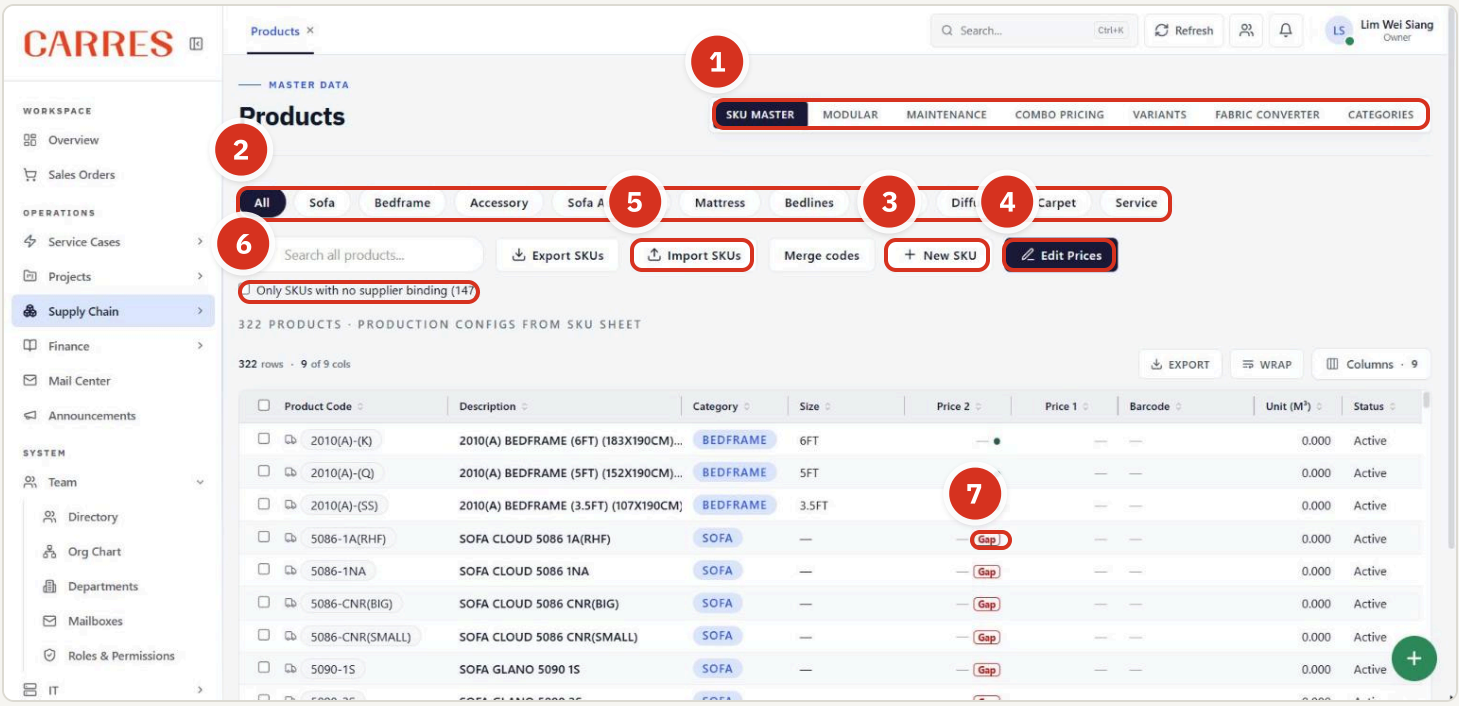

Purchasing

WHEN

Before a new item is sold; when prices change

PROBLEM IT SOLVES

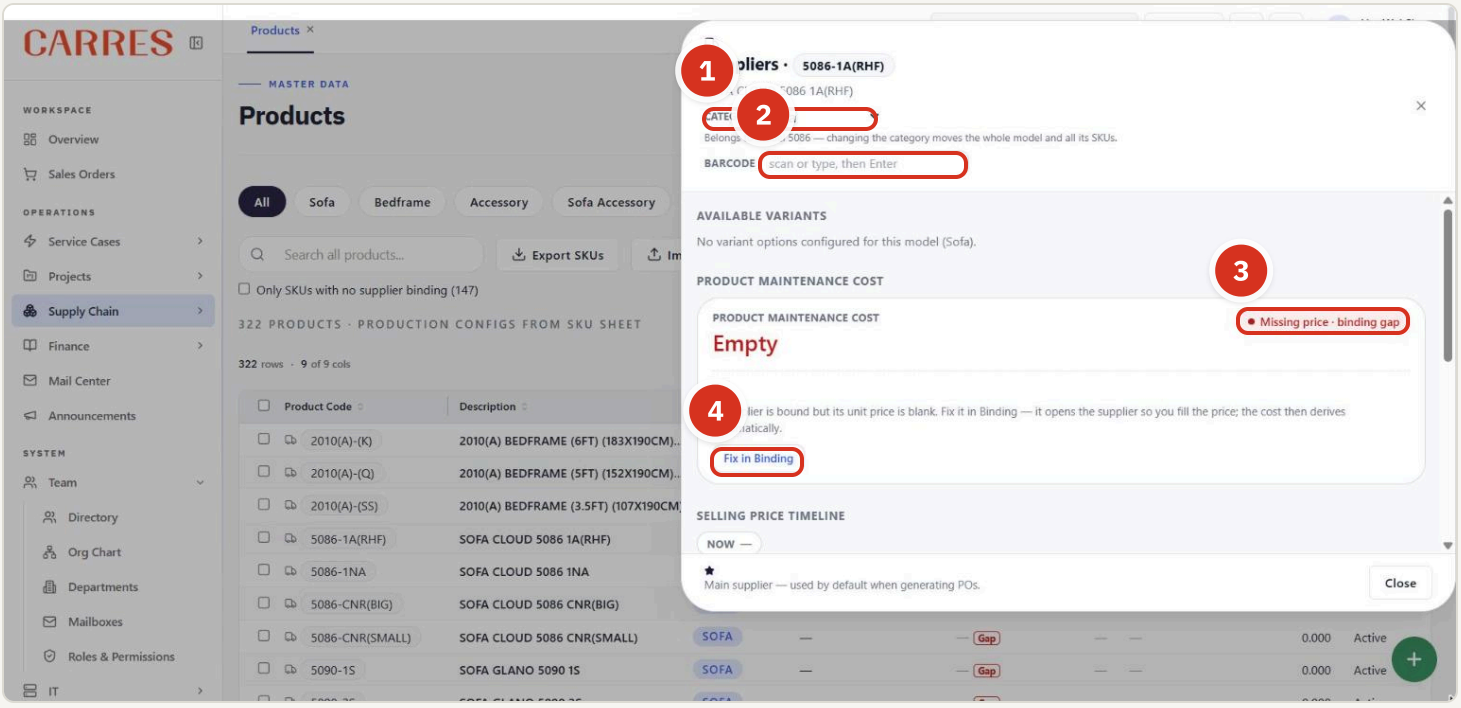

Prices and suppliers lived in spreadsheets and POs often used the wrong one. Now every SKU is bound to its main supplier and unit price, and the PO fills them in.

Supply Chain › Procurement › Products & Maintenance

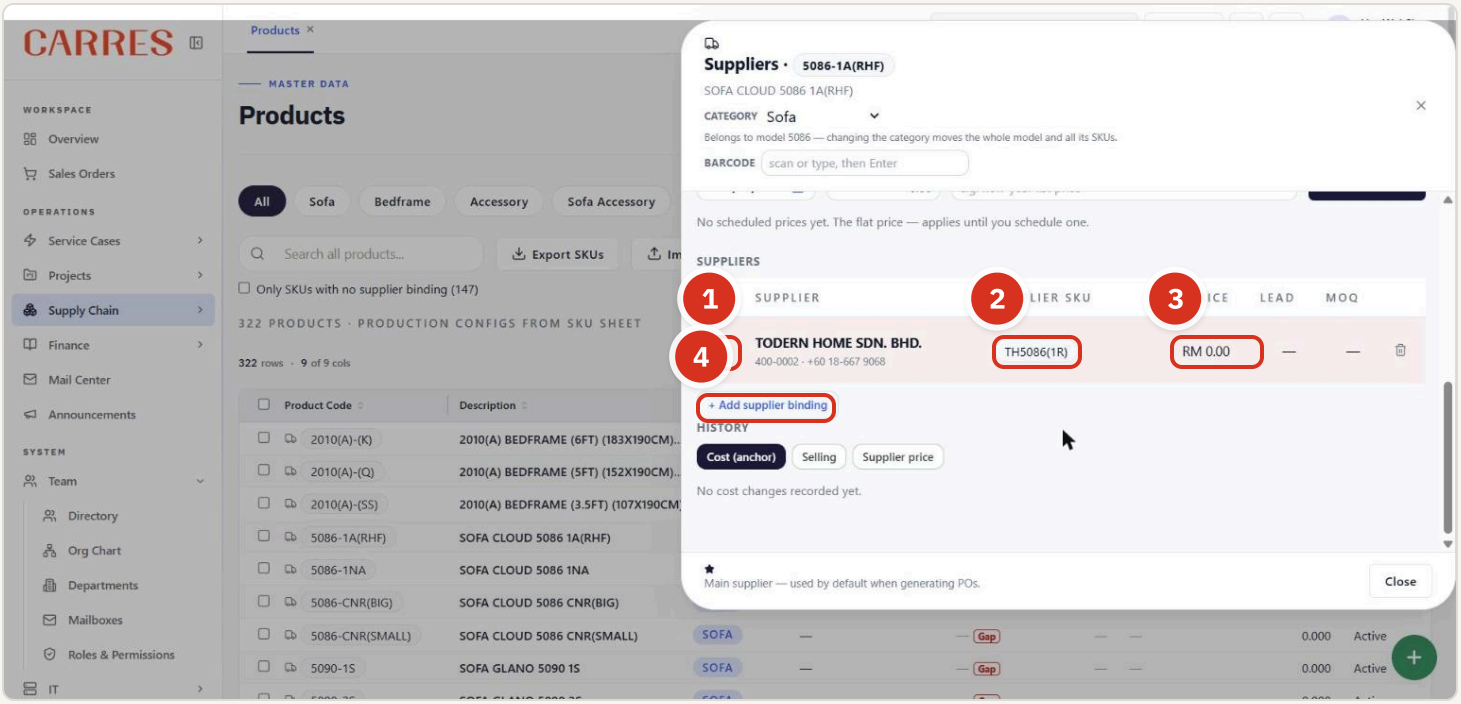

1. Tabs: SKU Master (all items), Maintenance (sizes and surcharge options), Combo Pricing (sofa set prices), Fabric Converter (fabrics), Categories.
2. By category: Sofa, Bedframe, Accessory, Sofa Accessory, Mattress, Dining, Diffuser, Carpet, Service.
3. `New SKU` adds an item.
4. `Edit Prices` changes many prices at once.

5. `Import SKUs` loads many items from Excel; `Export SKUs` downloads them all.
6. Tick this to see only SKUs **with no supplier binding**. MRP doesn't know who to buy these from.
7. Red **Gap** = this item has no cost price yet. Press it to fill it in.

Press an SKU (top half)

1. Category. Note: changing it moves every SKU of the same model (for example 5086) with it.
2. Barcode: scan it, or type it and press Enter.
3. **Missing price · binding gap** = a supplier is bound but its unit price is blank.
4. `Fix in Binding` goes straight to the price; the cost then works itself out.

Press an SKU (bottom half) › Suppliers

1. Star = main supplier. MRP and POs buy from it by default.
2. Supplier SKU: the supplier's own code (printed on the PO for the factory).
3. Unit Price: what this supplier charges us.
4. `+ Add supplier binding` adds another supplier (for example a backup factory).

Purchasing

Product Maintenance: sizes, heights and surcharges

WHAT IT IS

Options a salesperson can pick on an order: bedframe divan height, total height, leg height, sofa size, specials, fabrics

WHAT IT IS FOR

Picked on the order; the surcharge is added automatically

WHO USES IT

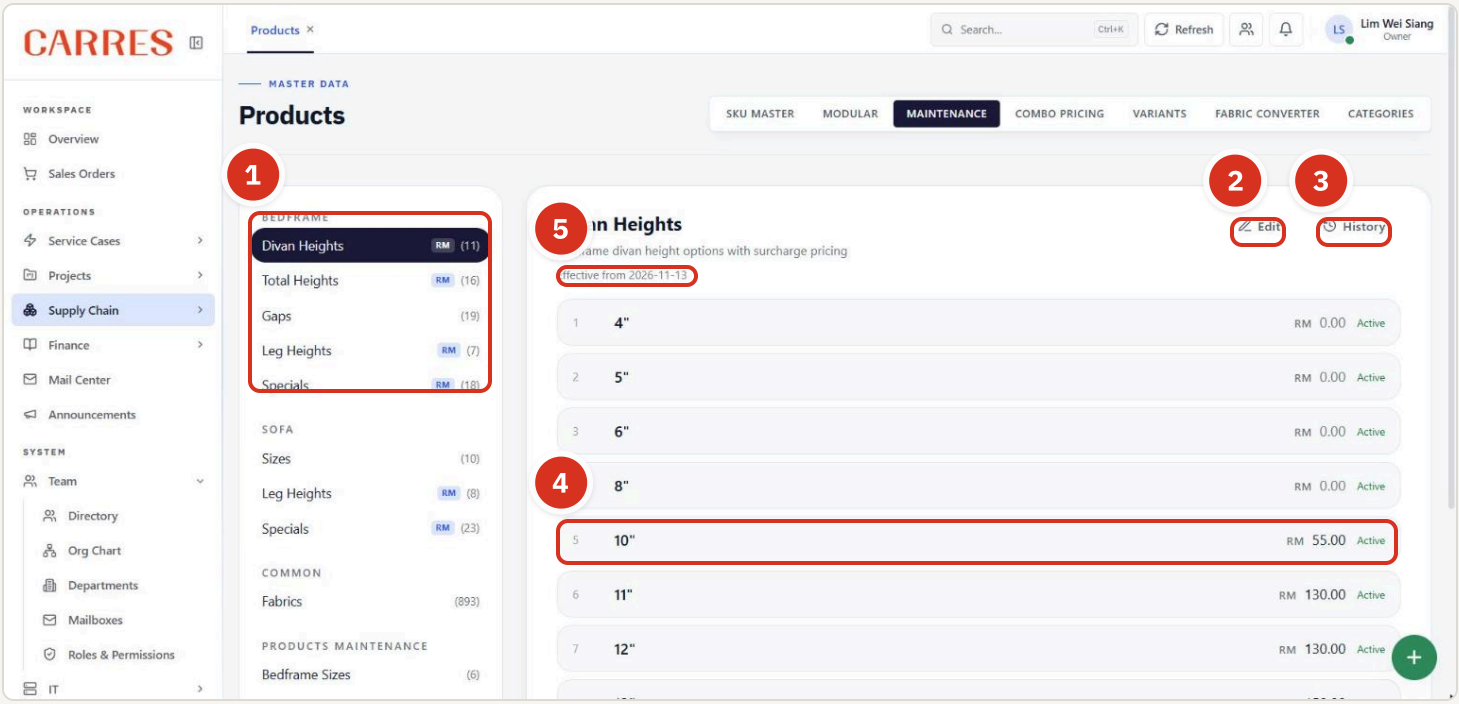

Purchasing

WHEN

When adding an option or changing a surcharge

PROBLEM IT SOLVES

Surcharges used to be remembered by the salesperson, and were often charged short. Now every option has a fixed surcharge from an effective date.

Products › Maintenance

1. Option lists on the left: BEDFRAME (Divan Heights, Total Heights, Gaps, Leg Heights, Specials), SOFA (Sizes, Leg Heights, Specials), COMMON (Fabrics). **RM** = carries a surcharge.
2. `Edit` changes this list and its surcharges.
3. `History` shows old prices, who changed them and when.
4. The surcharge of each option. For example Divan 10 inch adds RM 55.

5. Effective date: new orders from this day use these prices; older orders keep theirs.

Purchasing

Product Combo: sofa set prices

WHAT IT IS

The cost of a whole sofa set (for example 3+2+1, L shape, corner set)

WHAT IT IS FOR

When a customer buys the set, the PO uses the set price instead of adding up the pieces

WHO USES IT

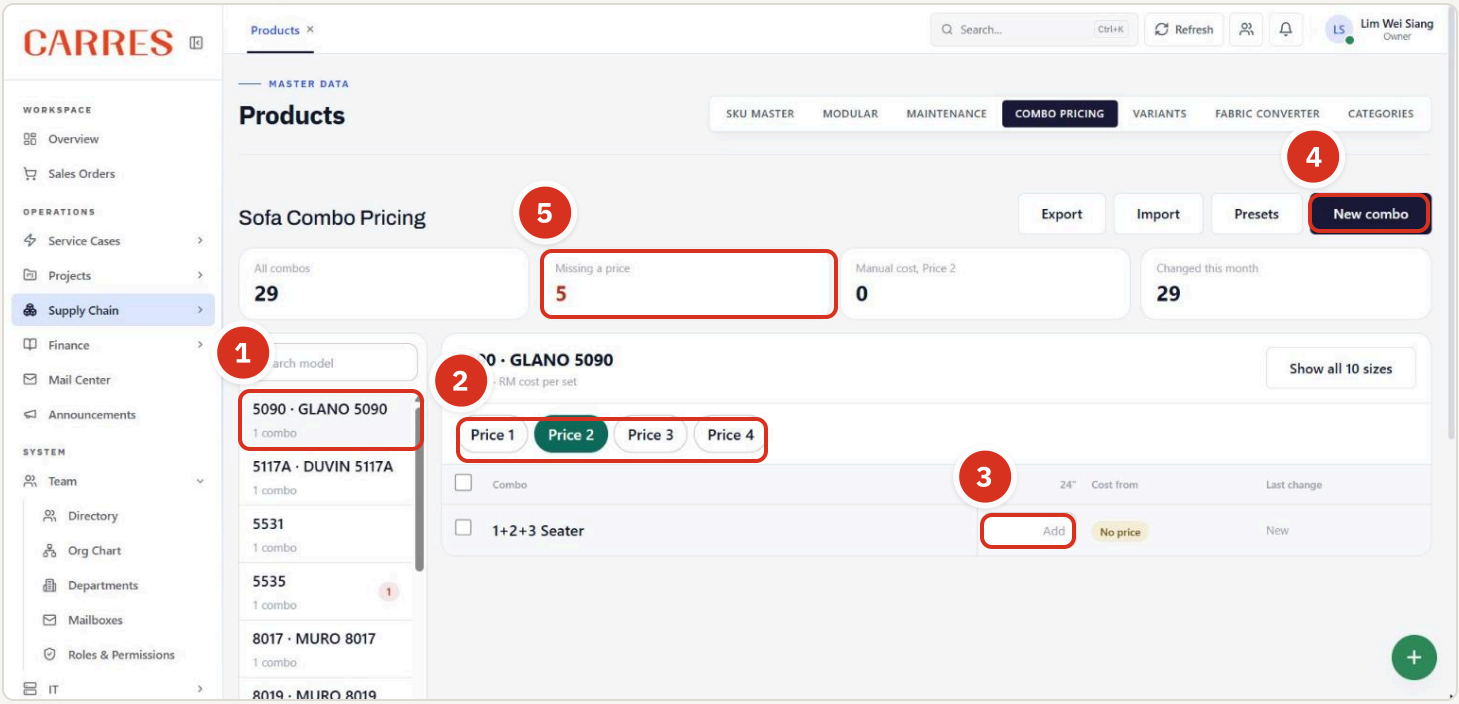

Purchasing

WHEN

When a new sofa model comes in; when the factory changes prices

PROBLEM IT SOLVES

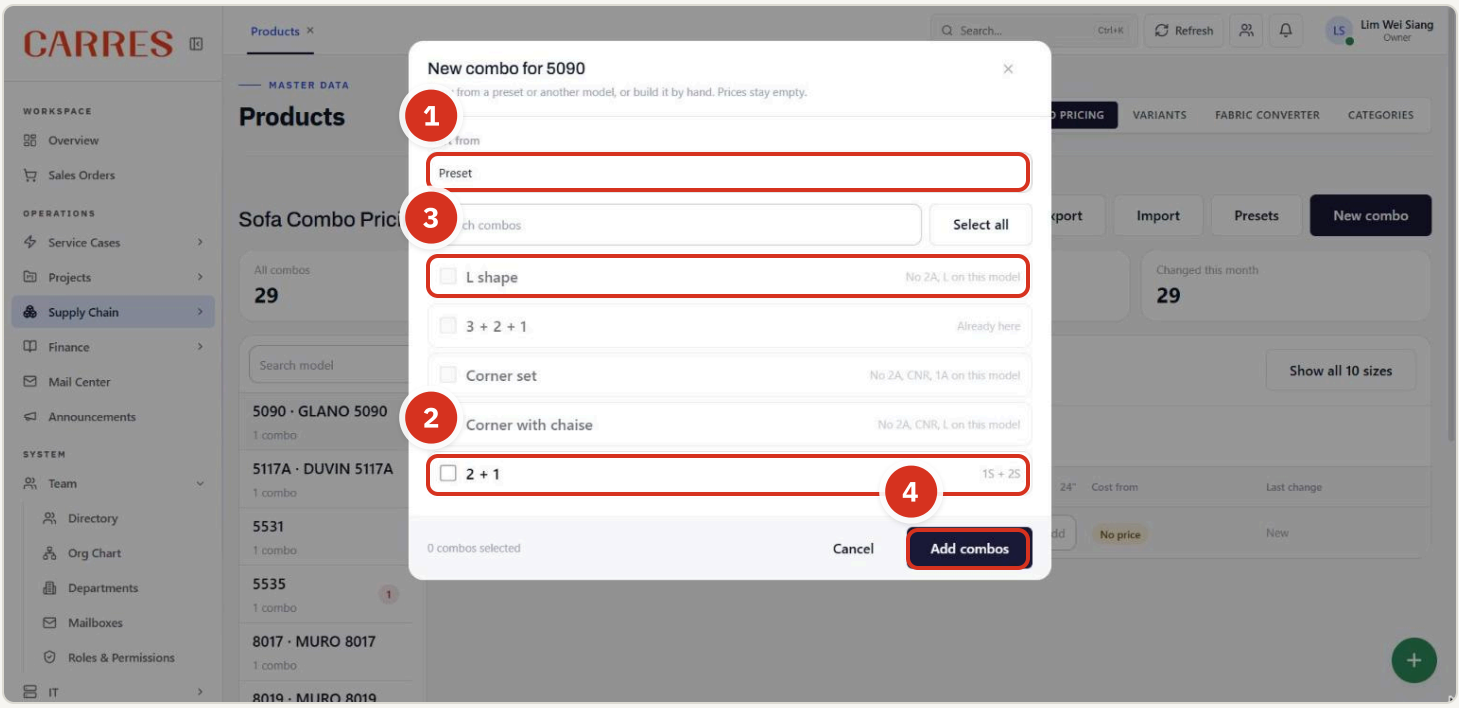

A set usually costs less than its pieces added up. There was nowhere to keep that, so POs often cost too much.

Products › Combo Pricing

1. Sofa models on the left (for example 5090 · GLANO). A red number = how many sets still have no price.
2. Price 1–4: fabric grade. 1 and 2 are fabric, 3 is half leather, 4 is full leather. Fill in a price for each grade.
3. Type the cost per set for this set and this grade here. **No price** = not filled in yet.
4. `New combo` adds sets to this model.

5 **Missing a price**: sets without a price across all models. Press it to see only those.

New combo

1 Start from a Preset (common sets), or copy another model.

2 Sets you can add: tick them. On the right is what the set is made of (for example 2+1 = 1S + 2S).

3 Grey ones cannot be picked; the reason is on the right, for example this model has no 2A or L piece, or the set already exists.

4 `Add combos` adds them. Prices start blank; fill them in on the page before.

How a combo is used: on the SO you add the sofa pieces one by one (for example 5090-3S, 5090-2S, 5090-1S) in the same fabric. When the PO is raised, from MRP, from the SO or by hand, the system sees that those pieces make up a set it has a combo for, and charges the PO at the combo cost for the PO date, spread across the lines. You do not pick a set on the SO. If someone changes a line price by hand on the PO, that line is left alone.

Purchasing

Fabric Converter: fabrics

WHAT IT IS

Every fabric code and its price grade

WHAT IT IS FOR

Once the customer picks a fabric, the system knows which Price column the PO uses

WHO USES IT

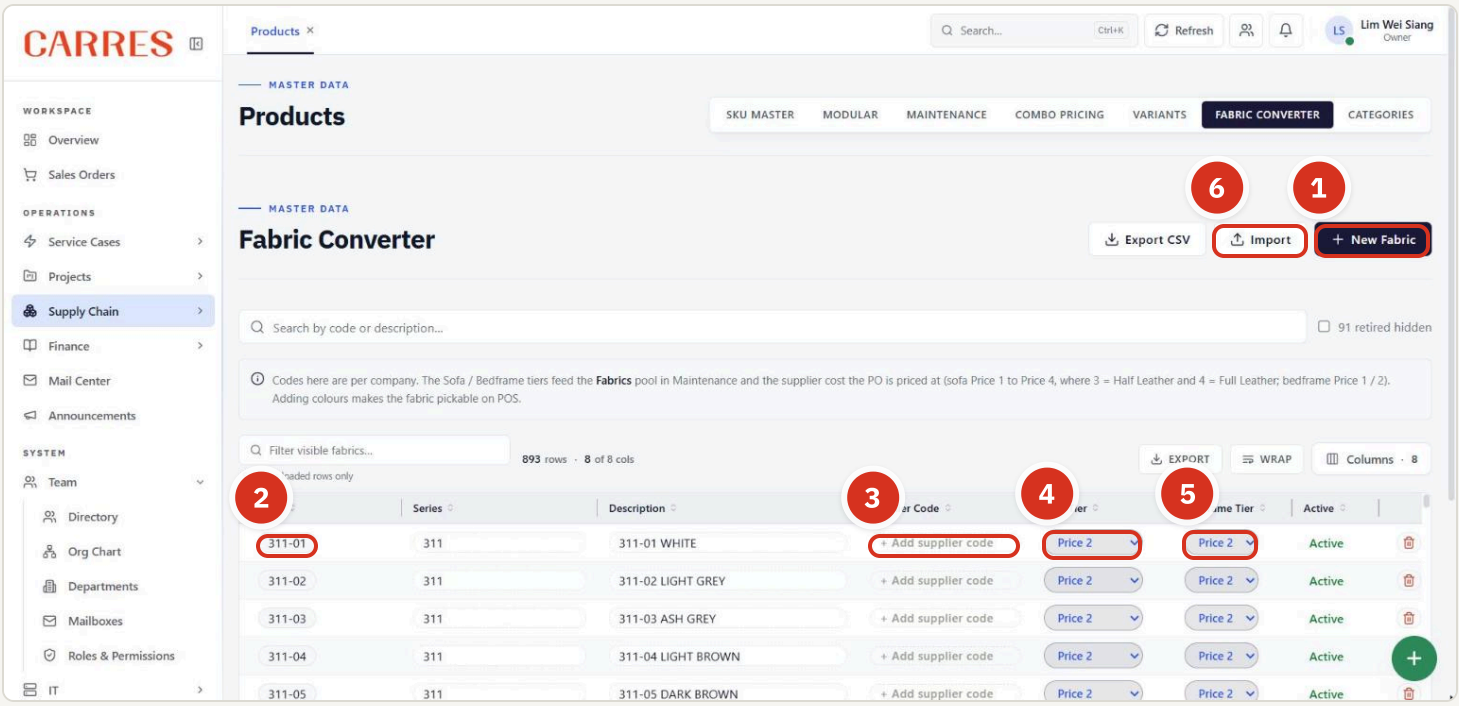

Purchasing

WHEN

When the factory brings in or drops a fabric

PROBLEM IT SOLVES

The same sofa costs very different amounts in different fabrics. Before, someone had to look up the grade and work out the price by hand.

Products › Fabric Converter

1. `New Fabric` adds a fabric.
2. Fabric code, for example 311-01 (series 311, colour 01 WHITE).
3. `+ Add supplier code` : the factory's own fabric code, printed on the PO.
4. Sofa Tier: which of Price 1–4 a sofa in this fabric uses.
5. Bedframe Tier: whether a bedframe uses Price 1 or 2.
6. `Import` loads many fabrics from Excel.

Example: the customer picks a 5090 sofa in fabric 311-01, whose Sofa Tier is Price 2. The PO buys from the factory at the **Price 2** cost of 5090 in Combo Pricing.

Management

SO Maintenance: order options

WHAT IT IS

The dropdowns on a Sales Order: showroom, warehouse, state and city, customer type, payment method, bank, instalment plan

WHAT IT IS FOR

Picked, not typed, so reports add up

WHO USES IT

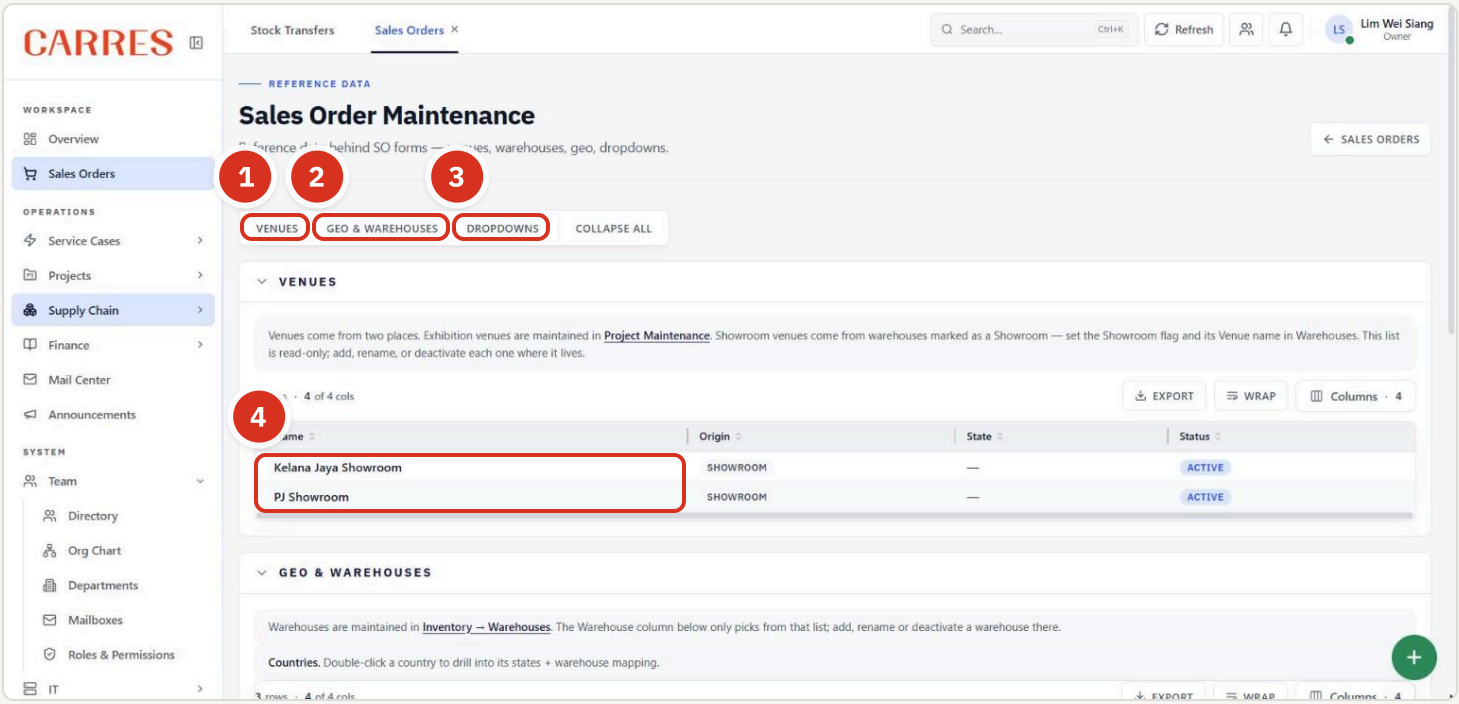

Management

WHEN

When a showroom opens or a bank or payment method is added

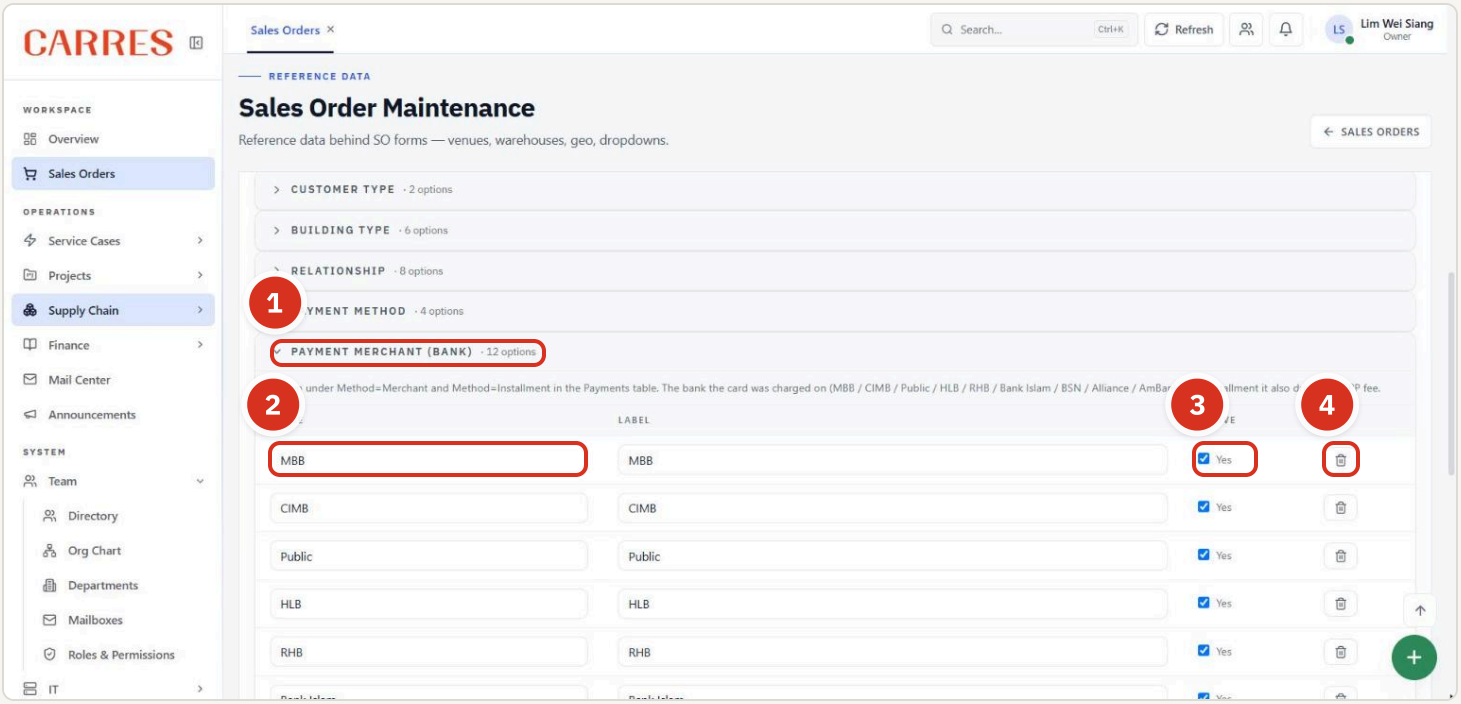

PROBLEM IT SOLVES

Everyone typed payment methods and bank names differently, and Finance could not reconcile.

Sales Orders › SO Maintenance

1. Venues: where orders are made (showrooms).
2. Geo & Warehouses: states, cities, postcodes, and which warehouse delivers to each state.
3. Dropdowns: the order dropdowns.
4. Showrooms come from the warehouse list: mark a warehouse as a Showroom and name it in Warehouses, and it appears here.

SO Maintenance › Dropdowns

1. Each list: Customer Type, Building Type, Relationship, Payment Method, Payment Merchant (Bank), Installment Plan.
2. Value / Label: the option. Edit it in place.
3. Active: untick = new orders can't pick it, old orders keep it.
4. Bin: delete the option.

Warehouse, management

Warehouses and showrooms

WHAT IT IS

Where we keep goods: warehouses, showrooms, the service store

WHAT IT IS FOR

Every item knows where it is; every SO and DO knows where it ships from

WHO USES IT

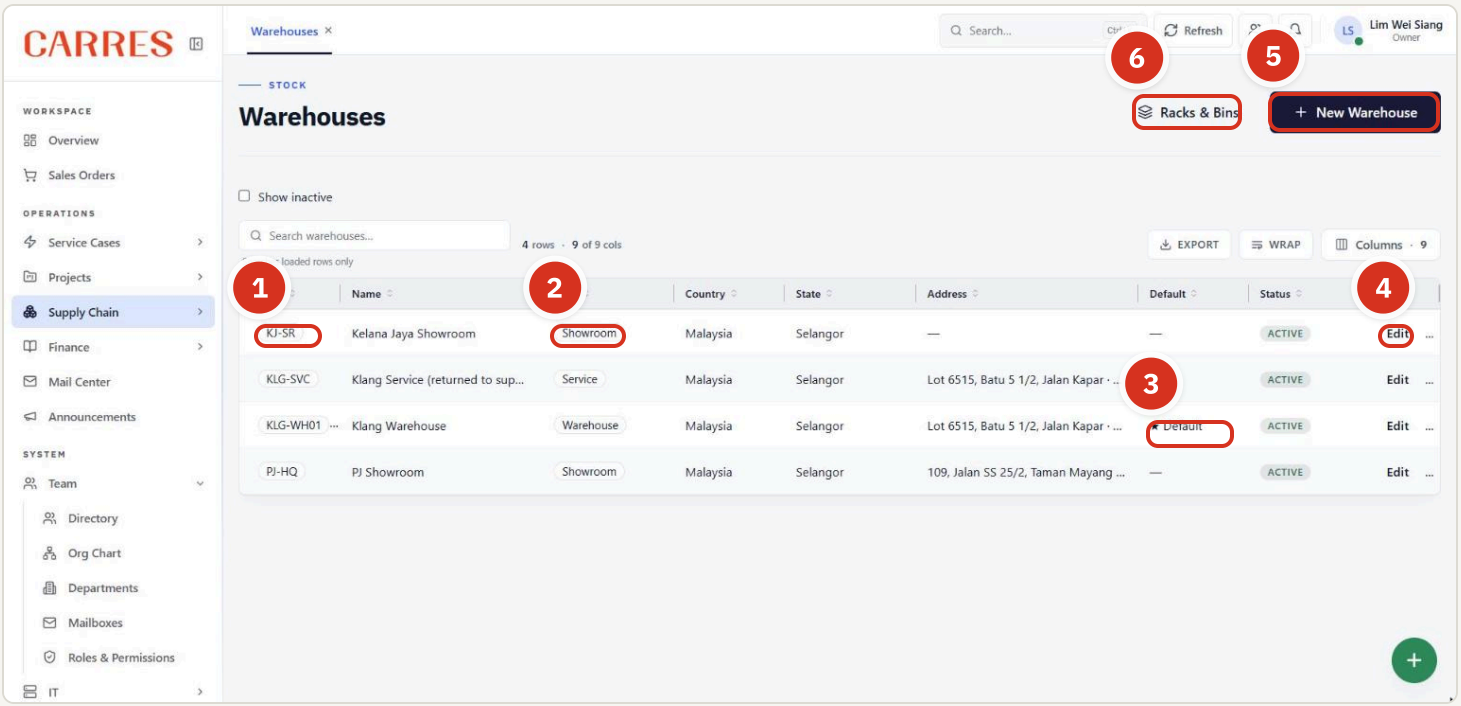

Warehouse, management

WHEN

When a warehouse or showroom opens

PROBLEM IT SOLVES

Nobody knew whether goods were in Klang or in the PJ showroom, so promised dates were missed.

Supply Chain › Warehouse › Warehouses

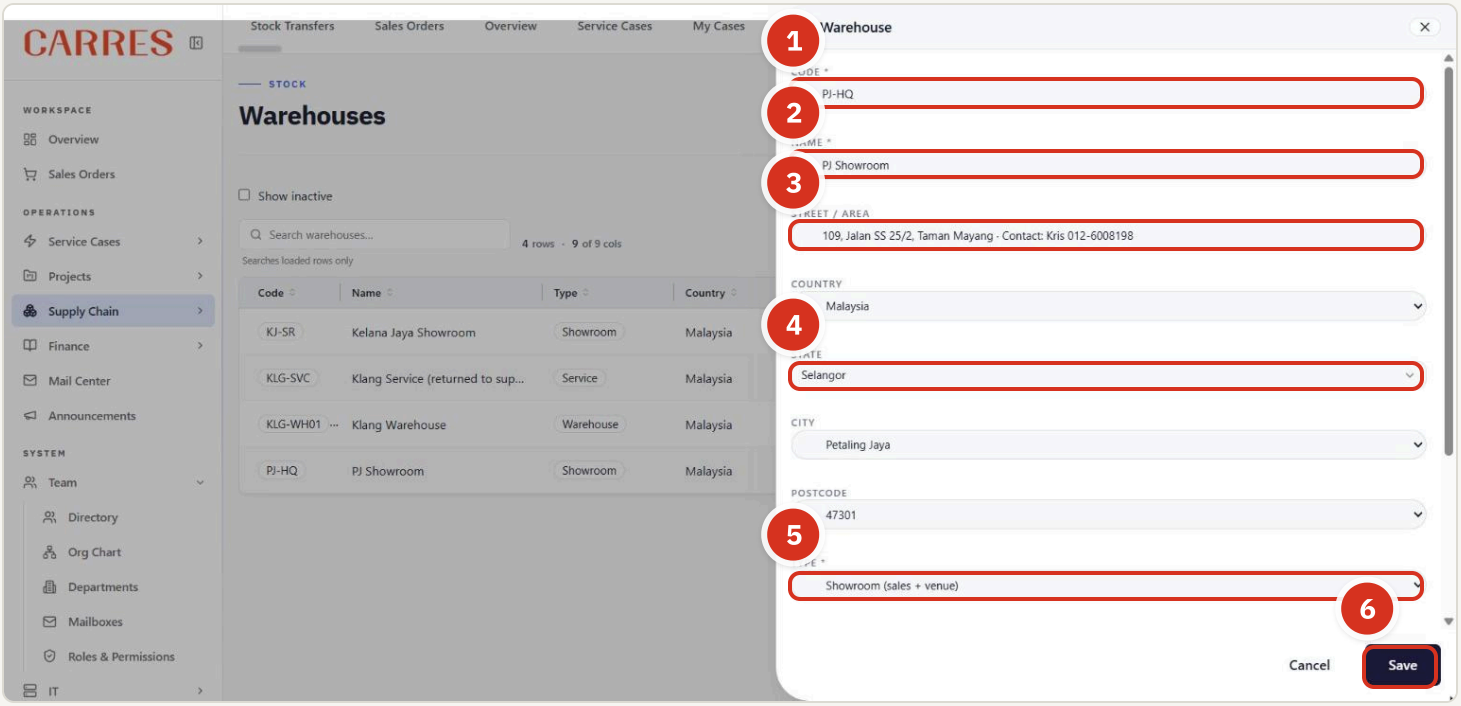

1. Codes: KLG-WH01 Klang Warehouse, PJ-HQ PJ Showroom, KJ-SR Kelana Jaya Showroom, KLG-SVC service store (goods going back to suppliers).
2. Type: Warehouse, Showroom, Service.
3. ★ Default: goods go here when no warehouse is named.
4. `Edit` changes address, contact and type.
5. `New Warehouse` adds a warehouse.
6. `Racks & Bins` sets shelf locations.

Warehouse, management

How to open a warehouse or a showroom

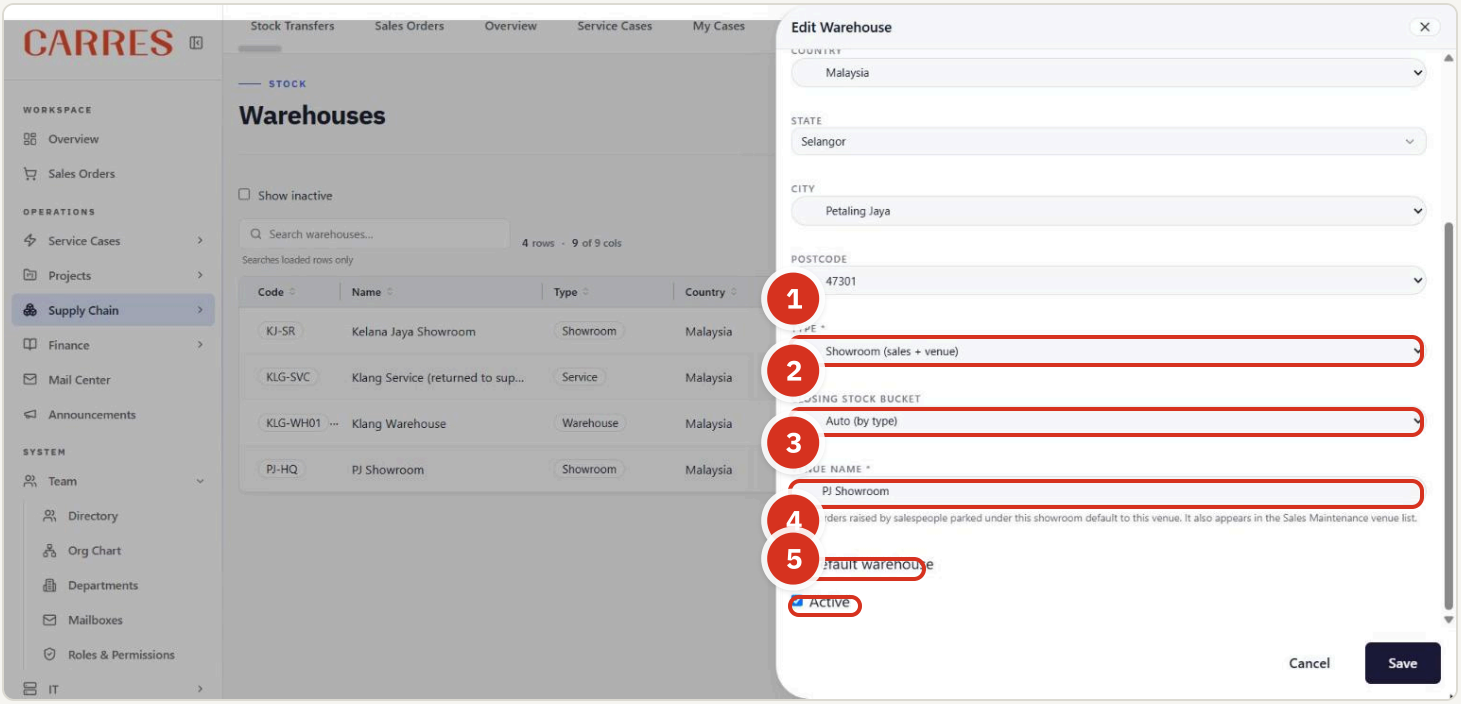

A showroom is a warehouse whose type is **Showroom**. One record holds both: where the display stock sits, and the selling place that orders are booked to.

1. Go to `Supply Chain` › `Warehouse` › `Warehouses` and press **New Warehouse** (or **Edit** on an existing one).
2. Fill in the code, name and address, then pick the **Type**.
3. For a showroom, also type the **Venue name**. This is the name that appears on orders and in SO Maintenance › Venues.
4. Press **Save**. The showroom can now be given to salespeople (next section).

Warehouses › Edit Warehouse (top)

1. Code: short and unique, for example PJ-HQ, KJ-SR, KLG-WH01.
2. Name, as staff call it.
3. Street / area. You can add the contact person after it.
4. State, then city and postcode.
5. Type: Warehouse (stock), Showroom (sales + venue), Display (partner display stock), Service centre, Others.
6. `Save`.

Warehouses › Edit Warehouse (bottom)

1. Type Showroom shows the Venue name box below.
2. Closing stock bucket: leave on Auto (by type). Finance uses it to split month-end stock.
3. **Venue name** (required for a showroom): orders by salespeople under this showroom are booked to this venue.
4. Default warehouse: where goods go when nothing else is chosen. Only one, today KLG-WH01.
5. Active: untick to close a warehouse without deleting its history.

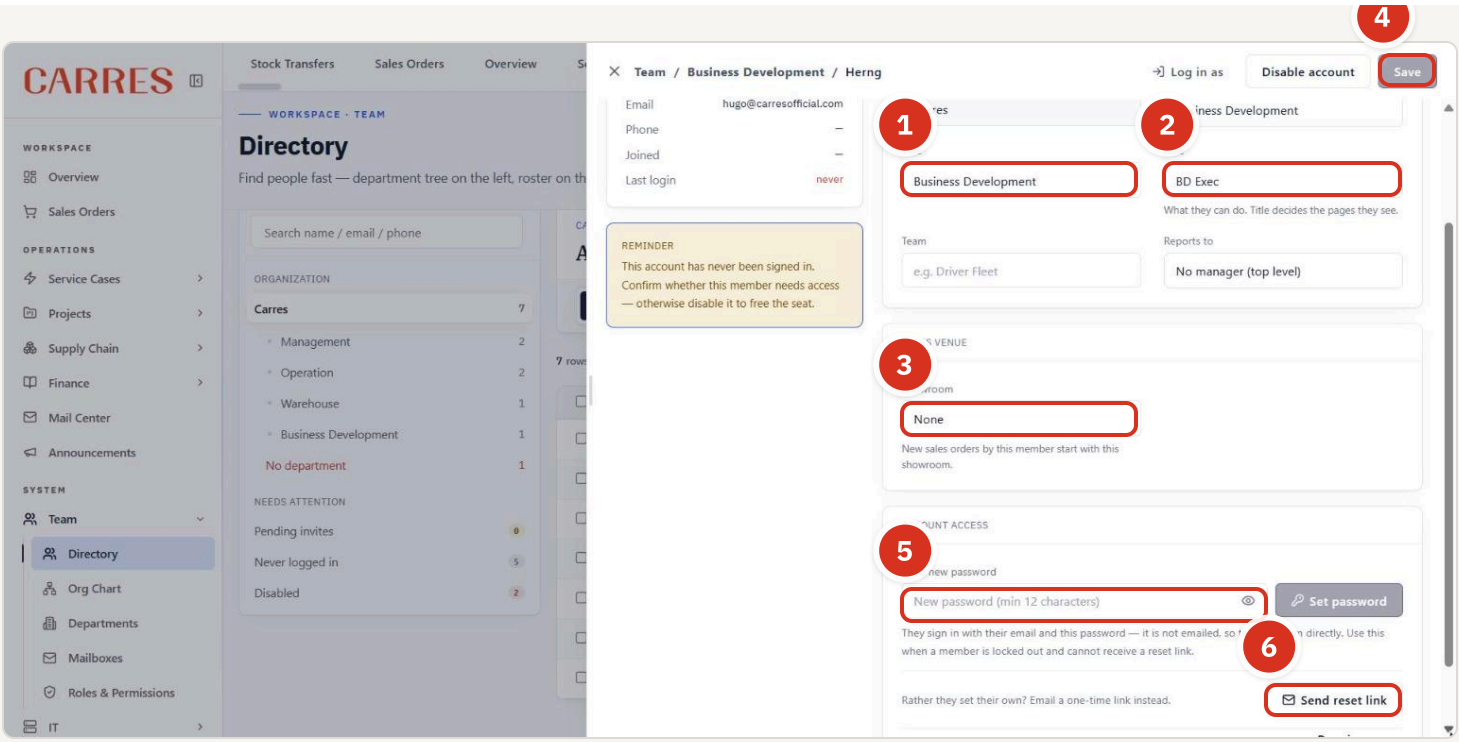

A showroom with no Venue name is refused on save, because every order from its salespeople would otherwise carry a blank showroom.

Management

How to link a salesperson to a showroom

Each salesperson belongs to one showroom. A new Sales Order then fills in the Showroom by itself, so nobody picks it by hand.

1. `Team` › `Directory`, press the person's row (or the pencil).
2. In **Sales venue › Showroom**, pick their showroom.
3. Press **Save** at the top. From now on their new orders start with that showroom.

Team › Directory › a member's profile

1. Title: decides which pages they see.
2. Role: what they can do.
3. **Showroom**: the showroom this salesperson sells for. New sales orders by this member start with it.
4. `Save` (top right).
5. Set a new password for someone locked out (tell it to them yourself; it is not emailed).
6. `Send reset link` emails them a link to set their own password instead.

Moving to another showroom only changes new orders. Orders already made keep the showroom they were made at.

Logistics

Transportation: lorries, drivers, 3PL

WHAT IT IS

Our own lorries, drivers and helpers, and outside 3PL carriers

WHAT IT IS FOR

Know who is free and which lorry can go; check 3PL bills

WHO USES IT

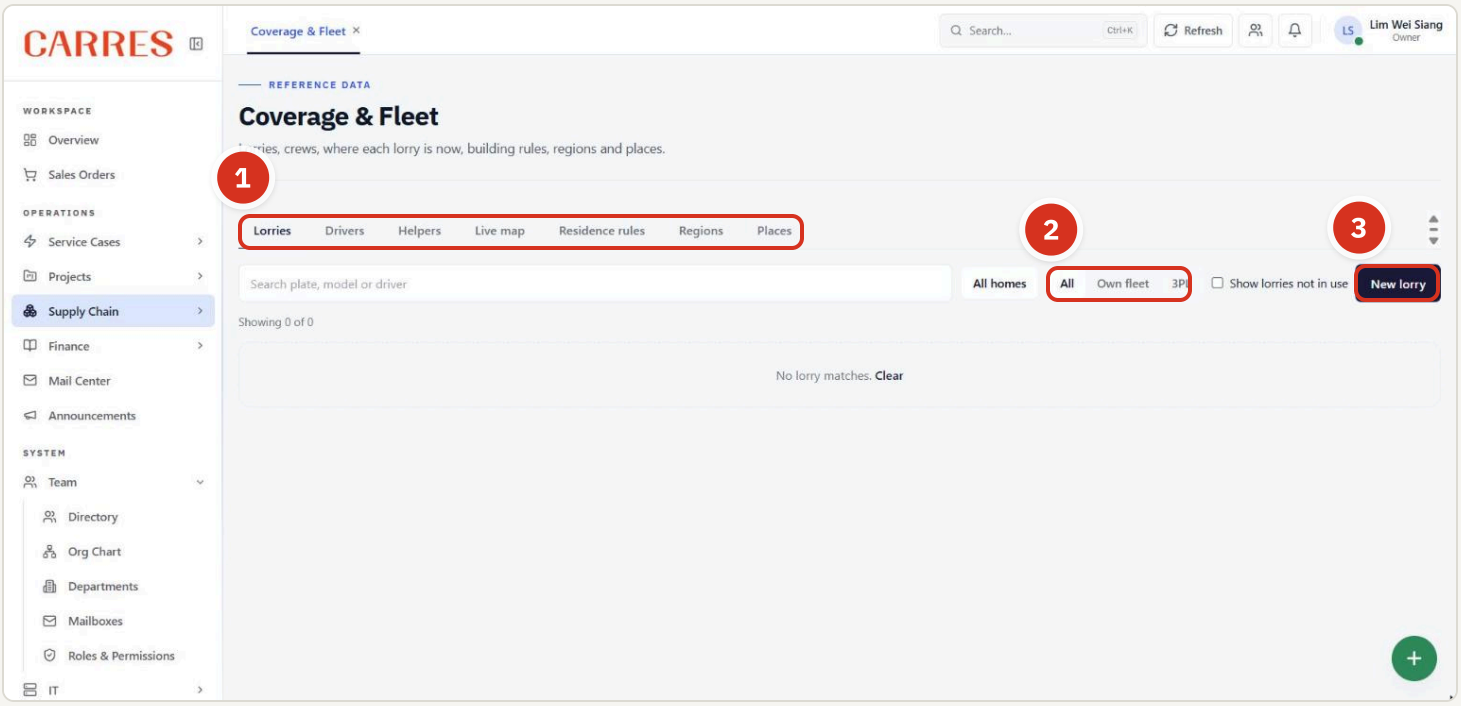

Logistics

WHEN

When a lorry, driver or 3PL company is added

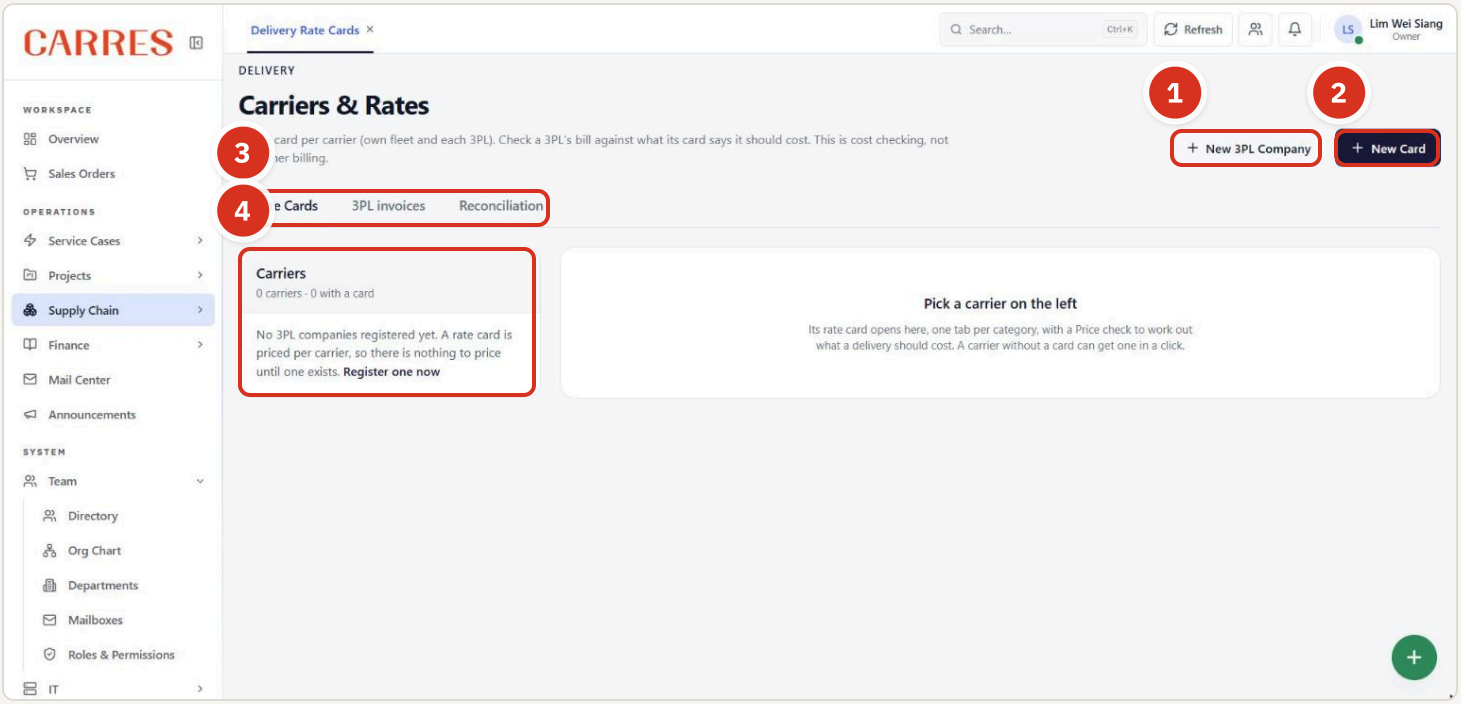

PROBLEM IT SOLVES

Planning used to live in WhatsApp and memory. Now lorries, drivers and regions are in the system, and plans and proof of delivery are recorded.

Supply Chain › Transportation › Maintenance › Coverage & Fleet

1. Tabs: Lorries, Drivers, Helpers, Live map, Residence rules (building rules), Regions, Places.
2. All / Own fleet / 3PL.
3. `New lorry` adds a lorry.

Transportation › Maintenance › Carriers & Rates

1. `New 3PL Company` registers an outside carrier.
2. `New Card` gives it a rate card (what each kind of delivery costs).
3. Rate Cards, 3PL invoices, Reconciliation.
4. Carriers on the left; press one to see its card.

This checks our delivery cost. It is not billing the customer.

After-sales

Service Maintenance

WHAT IT IS

Settings for after-sales cases

WHAT IT IS FOR

New cases go to the right person automatically; complaint types and fixes are the same for everyone

WHO USES IT

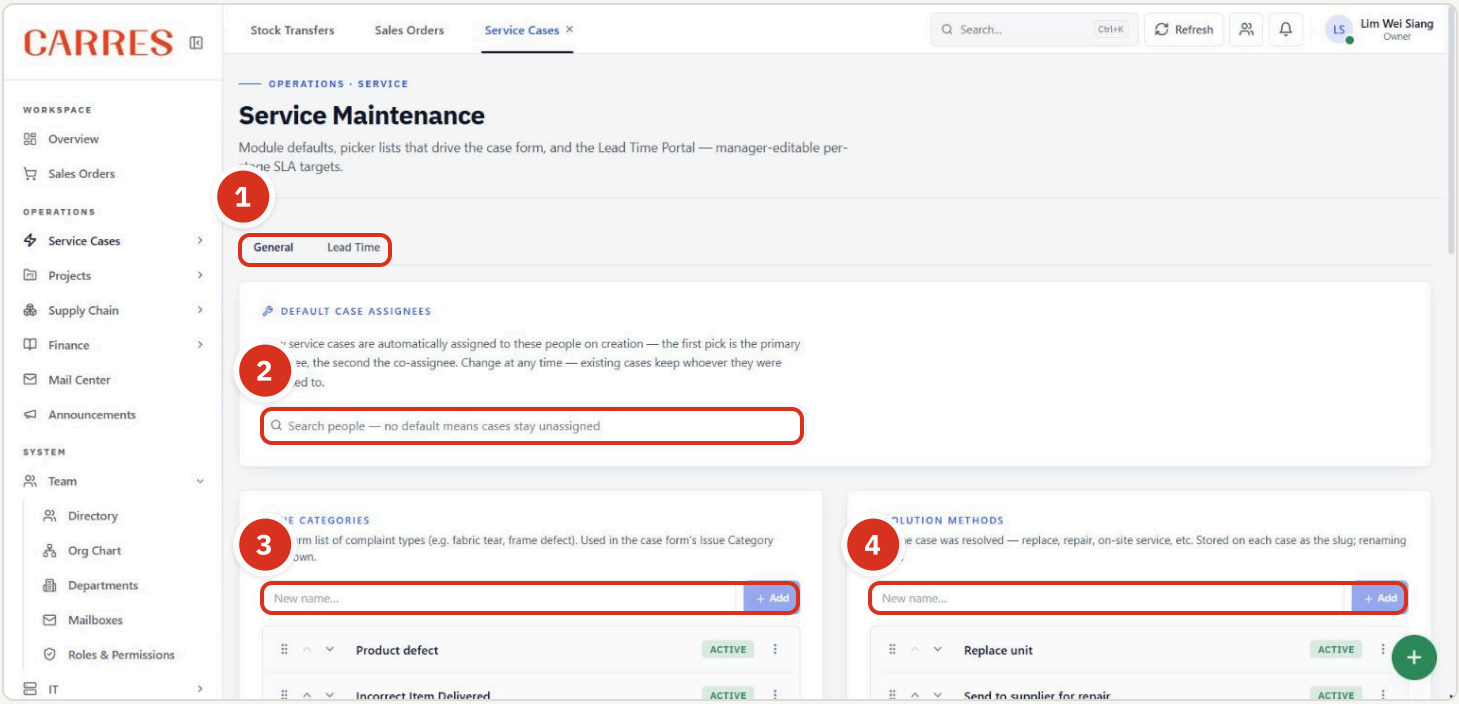

After-sales lead

WHEN

Before after-sales starts

PROBLEM IT SOLVES

A complaint nobody owns gets forgotten. Default assignees mean every new case has an owner from the start.

Service Cases › Service Maintenance

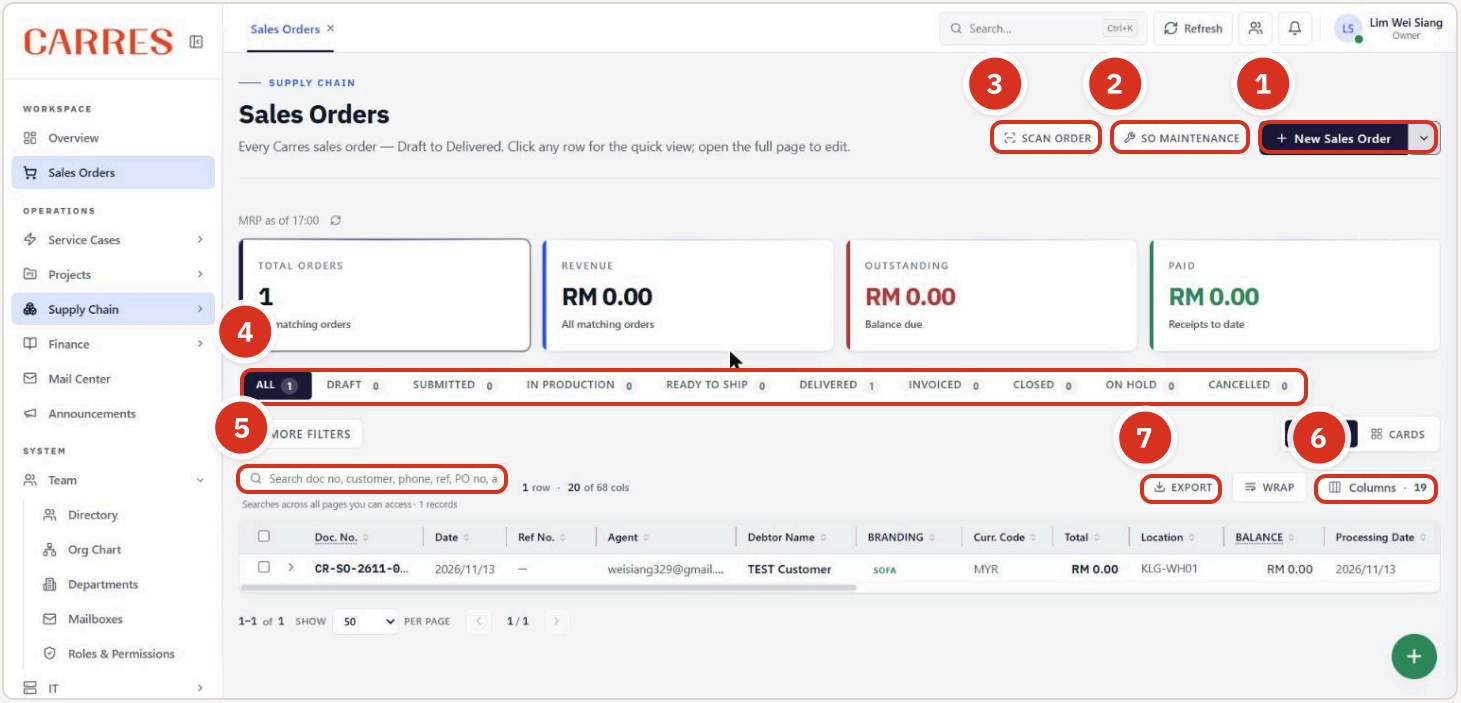

1. General settings; Lead Time (days allowed for each stage).
2. Default assignees: new cases go to these people.
3. Issue Categories: complaint types (Product defect, Incorrect Item Delivered ...).
4. Resolution Methods: how cases are fixed (Replace unit, Send to supplier for repair ...).

RUN AN ORDER, STEP BY STEP

Salesperson, Operation

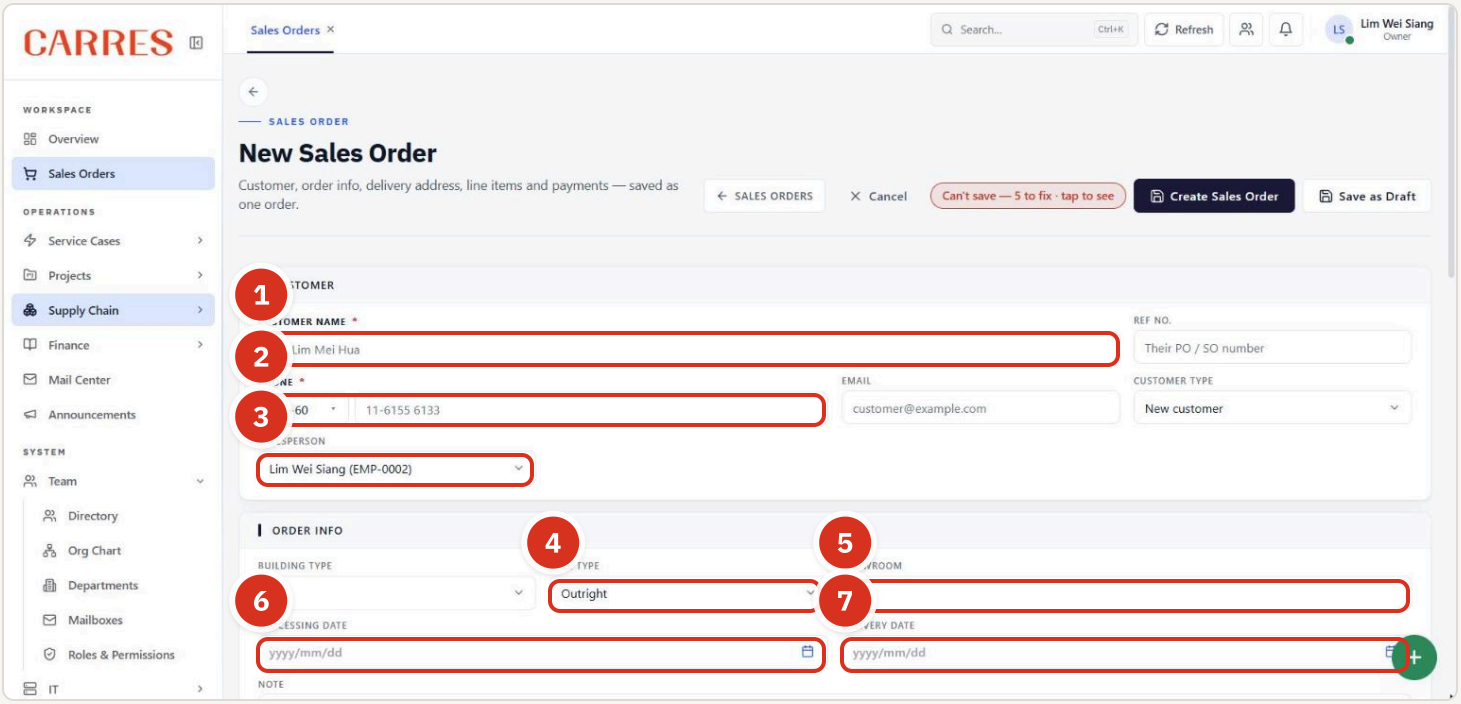

1. Create the Sales Order

`Create SO` → `Collect 50% deposit` → `Processing Date` → `Into production`

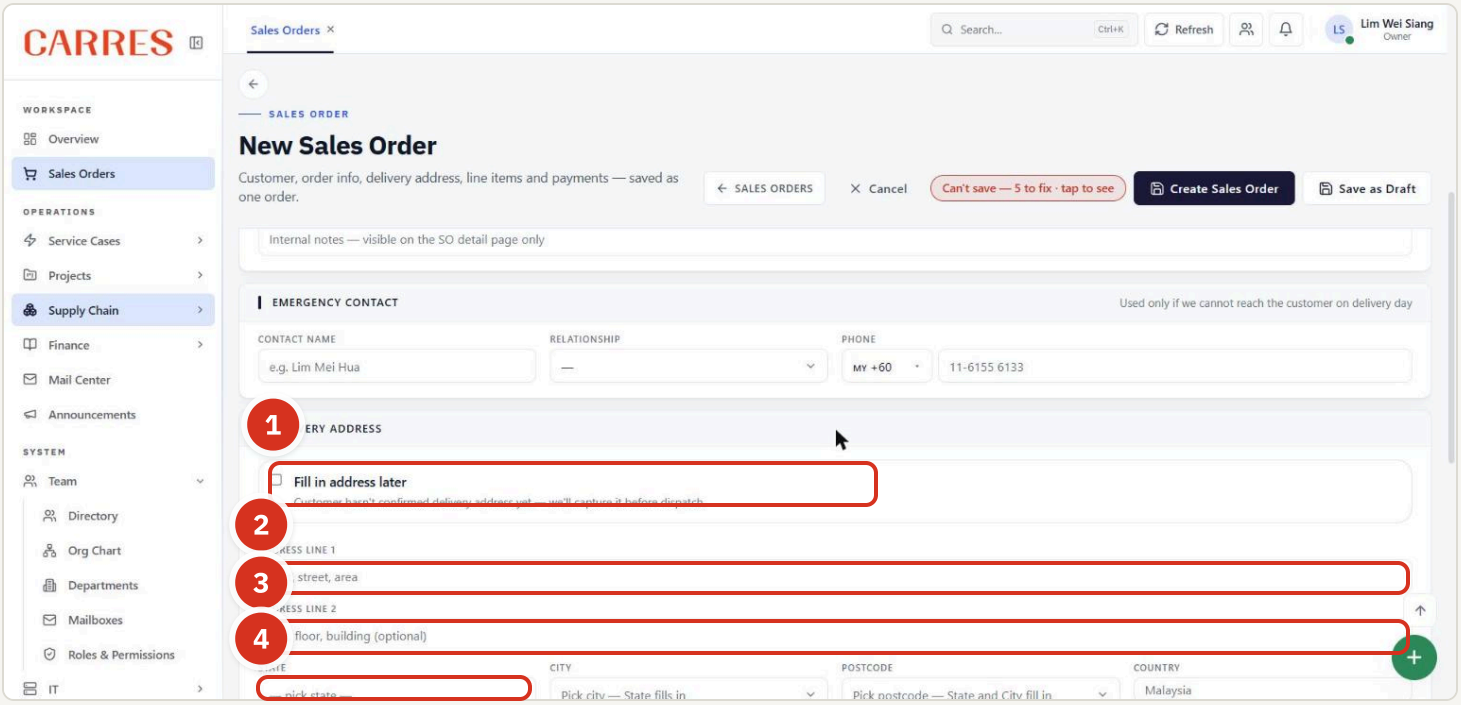

Sales Orders

1. `New Sales Order` starts an order.
2. `SO Maintenance` changes the order options.
3. `Scan Order`: photograph a handwritten order and the system reads it for you.
4. Status tabs: Draft, Submitted, In Production, Ready to Ship, Delivered, Invoiced, Closed, On Hold, Cancelled.
5. Search by order number, customer, phone or PO number.
6. `Columns` picks the columns.
7. `Export` downloads Excel.

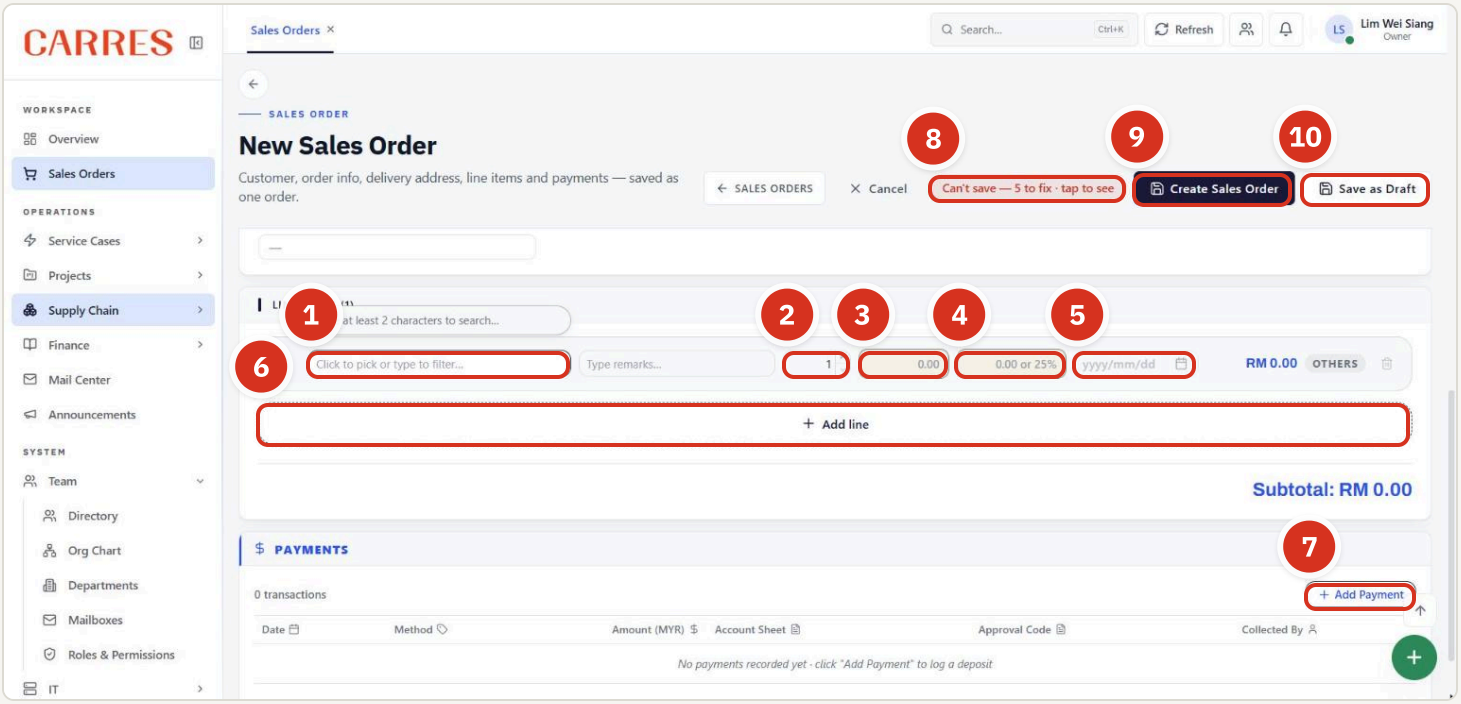

New Sales Order › customer and order info

1. Customer name (required).
2. Phone (required).
3. Salesperson. You, by default.
4. Sale Type: **Outright** or **Subscription**.
5. Showroom: filled in from the salesperson, nothing to pick. Carres has no fairs; every order is a Showroom or a Project.
6. Processing Date: when production starts. **It cannot be set until 50% deposit is paid.**
7. Delivery Date: the date promised to the customer.

New Sales Order › delivery address

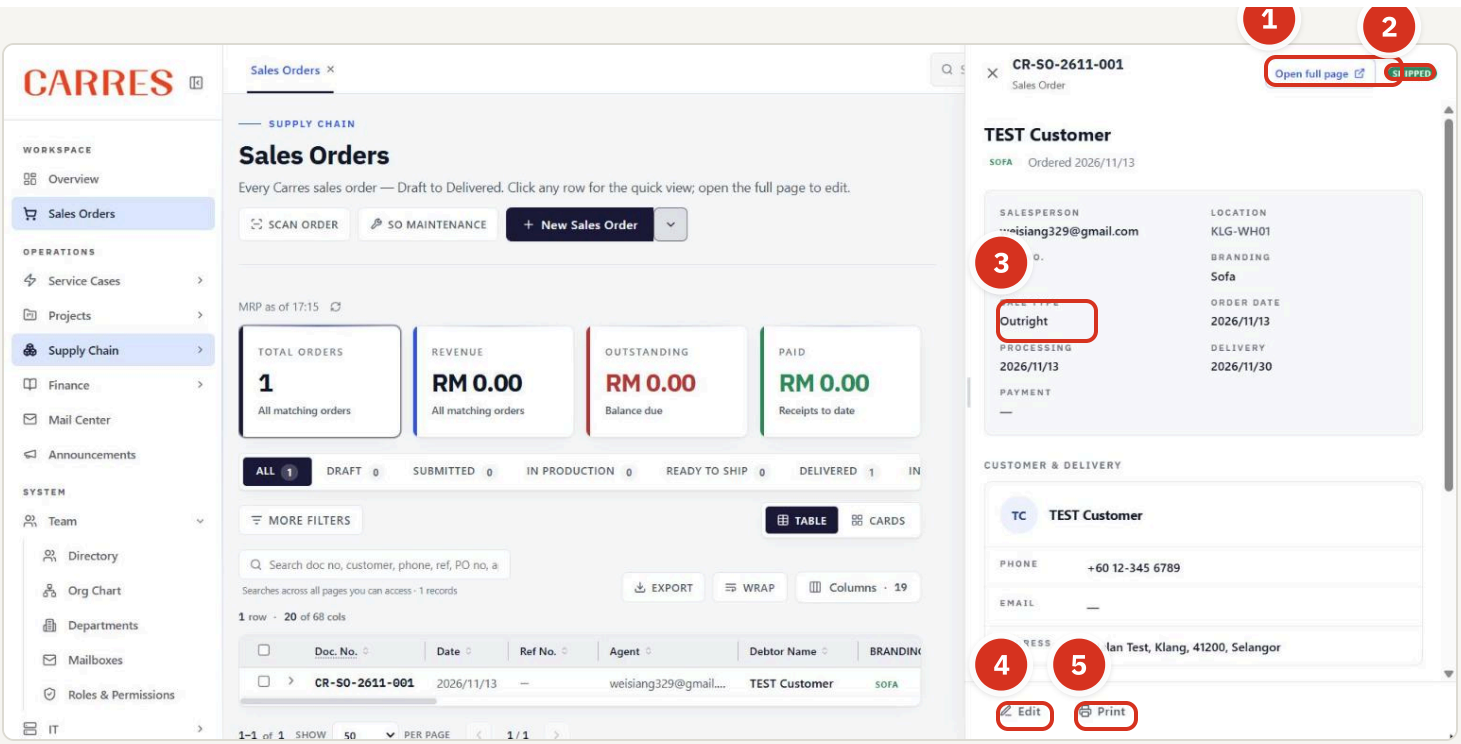

1. Address not confirmed yet: tick **Fill in address later**, and fill it in before delivery.
2. Address Line 1: unit, street, area.
3. Address Line 2: apartment, floor, building (optional).
4. Pick the state first; city and postcode follow. These two lines print exactly as typed on the DO and invoice.

New Sales Order › items and payments

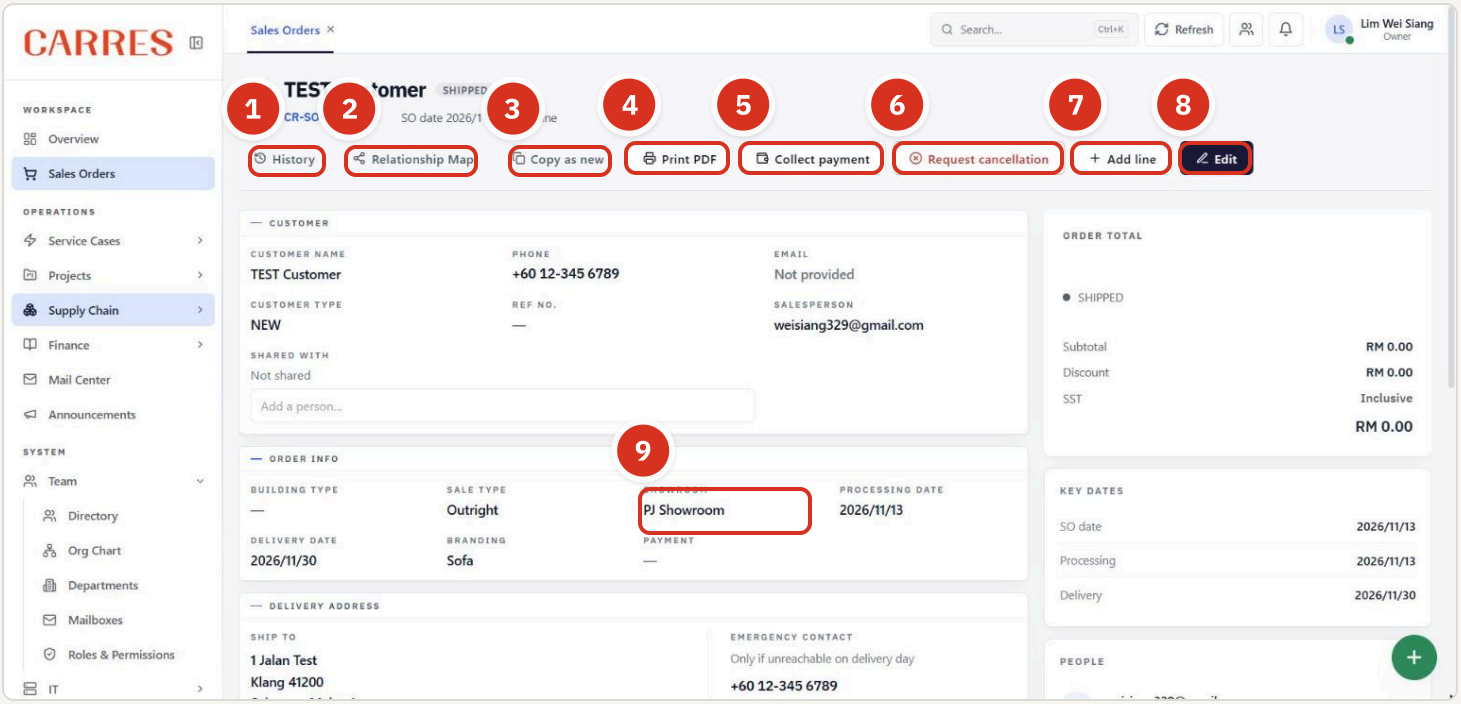

1. Pick the item here: type two or more letters of the SKU or model.
2. Quantity.
3. Unit price.
4. Discount: an amount or a percentage (for example 25%).
5. Delivery date for this line.
6. `+ Add line` adds the next item.
7. `+ Add Payment` records the deposit received.
8. Red note: how many things are still missing; press it to see which.
9. `Create Sales Order` creates the order.
10. `Save as Draft` saves it to finish later.

The 50% deposit rule: until the money received reaches half of the order total, the system will not let you set a Processing Date or Proceed into production. Record the deposit with **Collect payment** first.

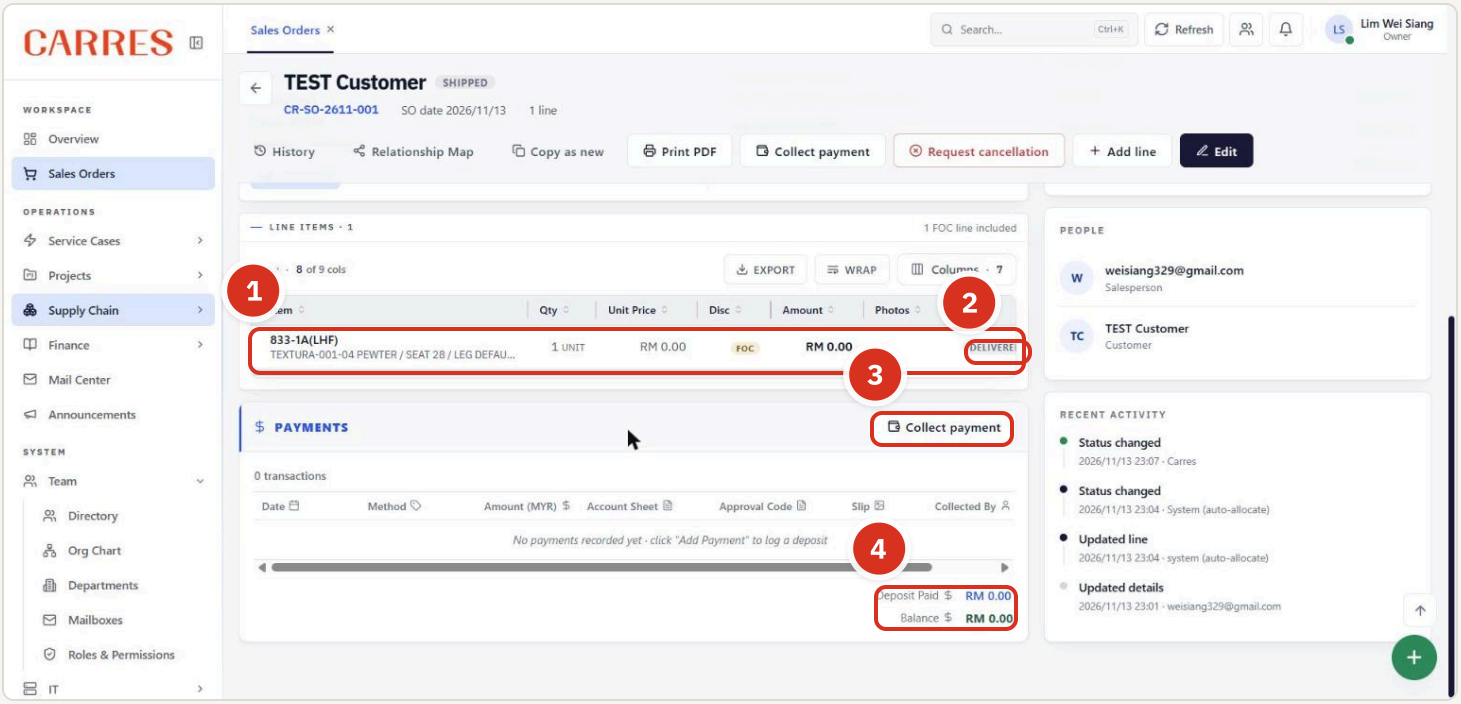

Press a row › quick view

1. `Open full page` opens the whole order.
2. Current status.
3. Sale Type, dates and warehouse at a glance.
4. `Edit` changes it.
5. `Print` prints it for the customer.

Sales Order full page

1. `History` : who changed what, and when.
2. `Relationship Map` : the POs, DOs and invoices that came from this order.
3. `Copy as new` : a new order like this one (handy for returning customers).
4. `Print PDF` : the order for the customer.
5. `Collect payment` : record money received (deposit or balance).
6. `Request cancellation` : ask to cancel; needs approval.
7. `Add line` : add an item.
8. `Edit` : change the details.
9. Showroom shows where the order was made.

Sales Order › items and payments

1. The items on this order. The second line is the fabric, seat and leg choices.
2. Stock: where each line stands (waiting for goods, in the warehouse, delivered).
3. `Collect payment` records money received.
4. Deposit Paid and Balance: what the customer has paid and still owes.

Salesperson, Operation

Stock status on a Sales Order

Every line on a Sales Order shows a **Stock** status, in the order's line list and in the **Stock Status** column of the Sales Orders list.

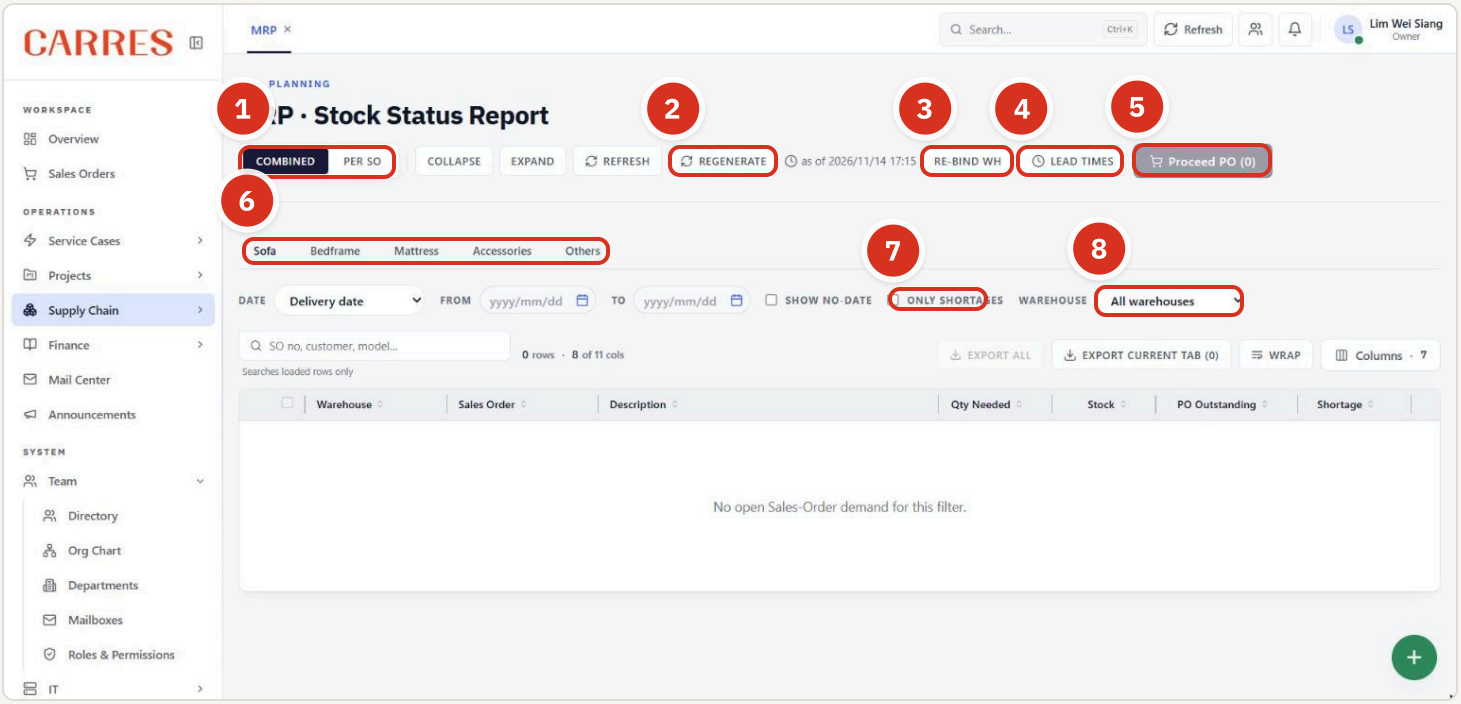

Status	What it means	What to do
PENDING	Nothing is set aside for this line yet. Either the goods have not arrived, or the order has no Processing Date yet.	Check the deposit (50%) and set the Processing Date. If it still says PENDING, the goods are on a PO or still need one (see MRP).
PARTIAL	Some of the quantity is set aside in the warehouse, the rest is still coming.	Wait for the rest, or deliver what is ready.
READY	The full quantity is set aside in the warehouse for this customer.	Plan delivery: Delivery Planning, then the DO.
DELIVERED	The goods went out on a Delivery Order.	Invoice it, if not done.

- Next to the status you may see a **PO number with a date**: that is the PO bringing the goods in, and when the supplier said they arrive.
- Stock is only set aside once the order has a **Processing Date**. Before that, every line stays PENDING even if the warehouse has the goods.
- Sofas are set aside by batch; other items are taken first-in, first-out from what arrived.

Purchasing

2. MRP: work out what to buy

Once an SO goes into production, MRP looks at every order, takes away the stock on hand and the goods already ordered but not yet in, and shows what is still short.

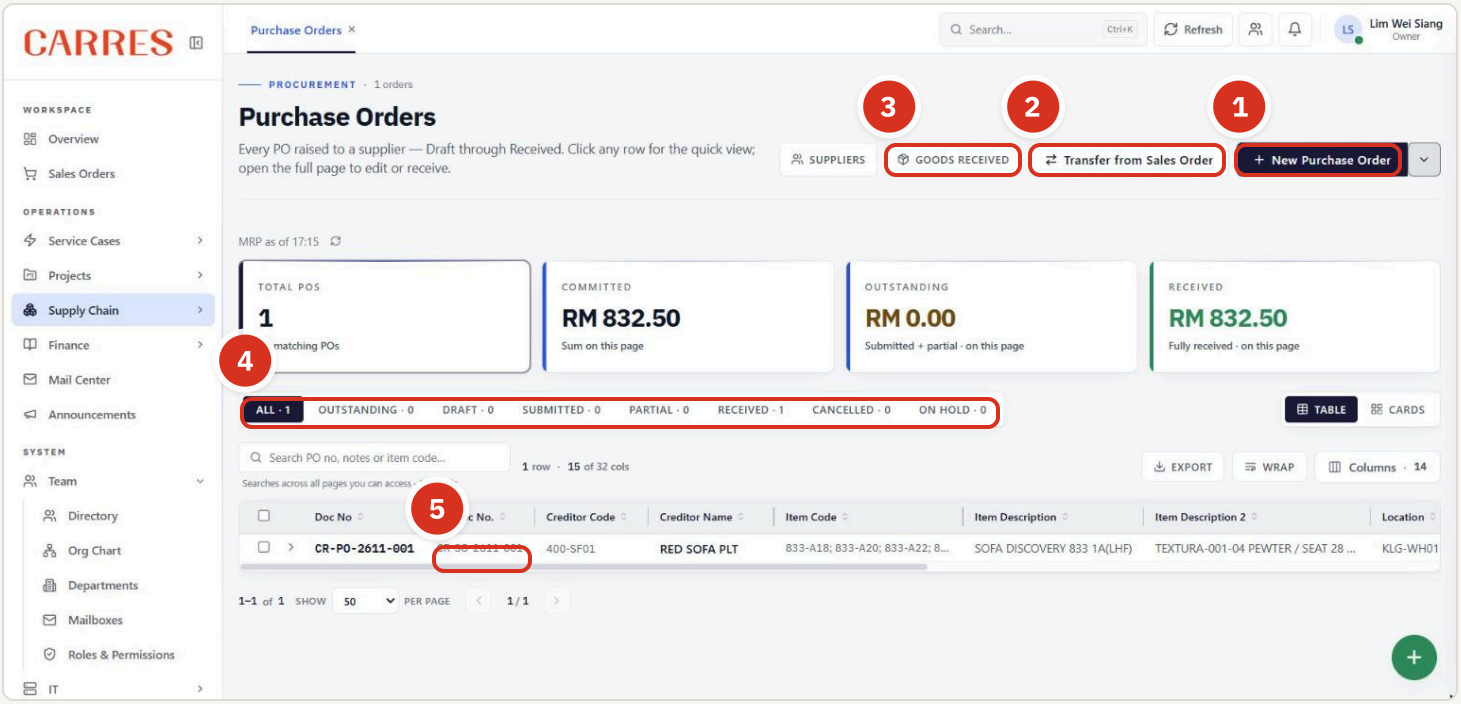

Supply Chain › Procurement › MRP · Stock Status

1. Combined shows each item in total; Per SO shows order by order.
2. `Regenerate` recalculates (press it after creating SOs).
3. `Re-bind WH` re-decides which warehouse ships each order, from its address.
4. `Lead Times`: how many days each supplier needs.
5. `Proceed PO` turns the ticked shortages into POs, split by supplier automatically.
6. By category: Sofa, Bedframe, Mattress, Accessories, Others.
7. Tick **Only shortages** to see only what is short.
8. One warehouse only.

MRP raises POs with each SKU's **main supplier** and unit price. SKUs with no binding are not ordered automatically; bind them in Products first.

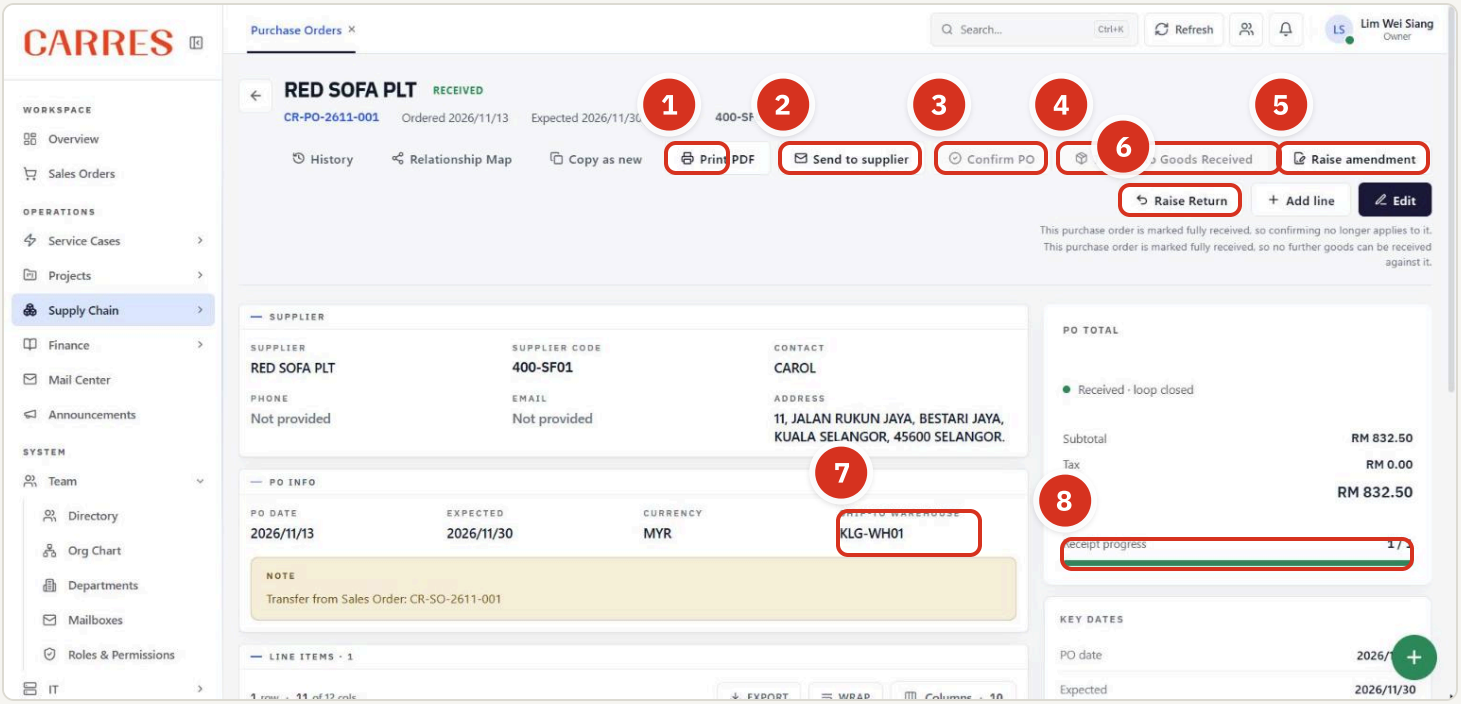

Purchasing

3. PO: order from the factory

Supply Chain › Procurement › Purchase Orders

1. `New Purchase Order` raises a PO by hand (for example to restock the warehouse).
2. `Transfer from Sales Order` raises a PO straight from an SO.
3. `Goods Received` goes to receiving.
4. Status: Outstanding (not fully received), Draft, Submitted, Partial, Received, Cancelled.
5. SO Doc No.: which customer order this PO is for.

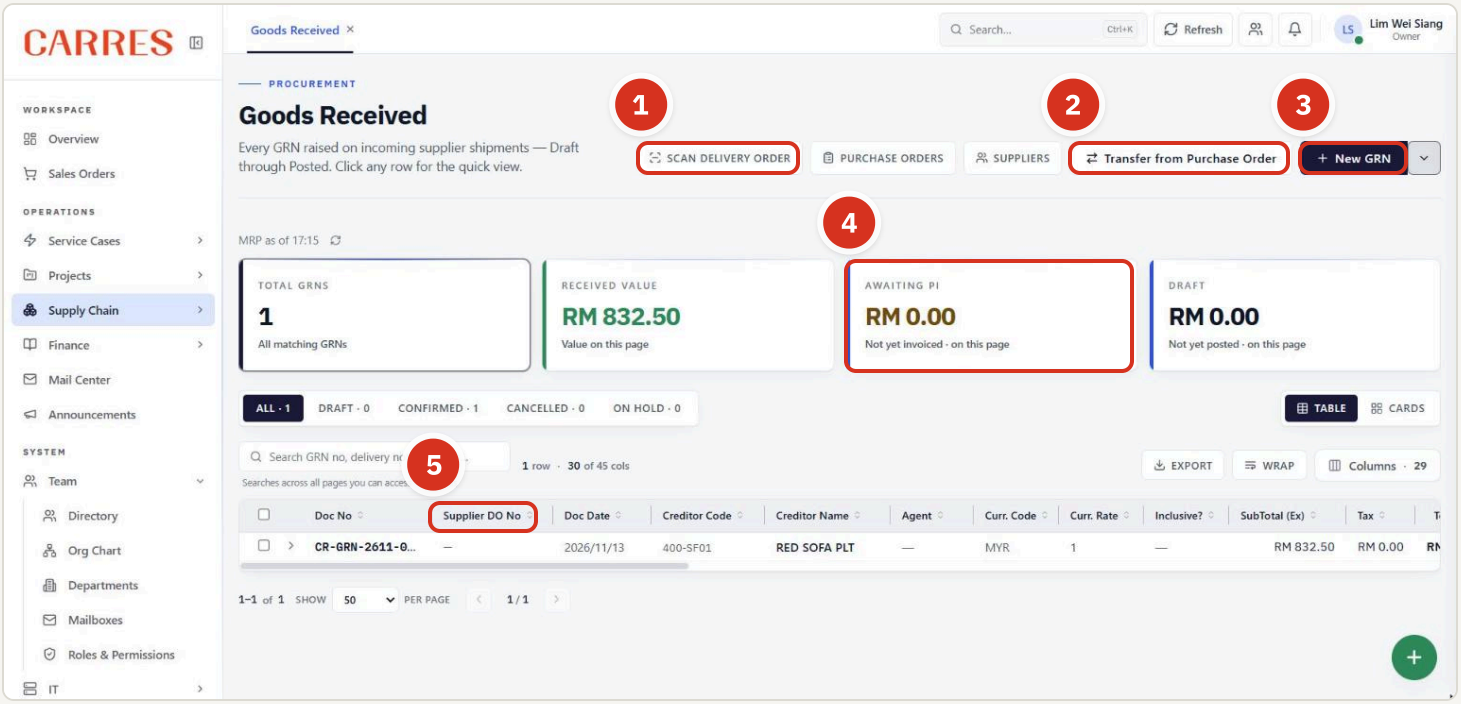

Purchase Order full page

1. `Print PDF` prints the PO.
2. `Send to supplier` emails the PO to the factory.
3. `Confirm PO`: press when the factory confirms.
4. `Transfer to Goods Received`: the goods are here; raise the GRN from this PO.
5. `Raise amendment`: the factory changed the date or quantity.
6. `Raise Return`: goods are faulty and go back to the factory.
7. Ship-to warehouse: where the goods are delivered.
8. Receipt progress: pieces received / pieces ordered.

Warehouse

4. GRN: goods arrive

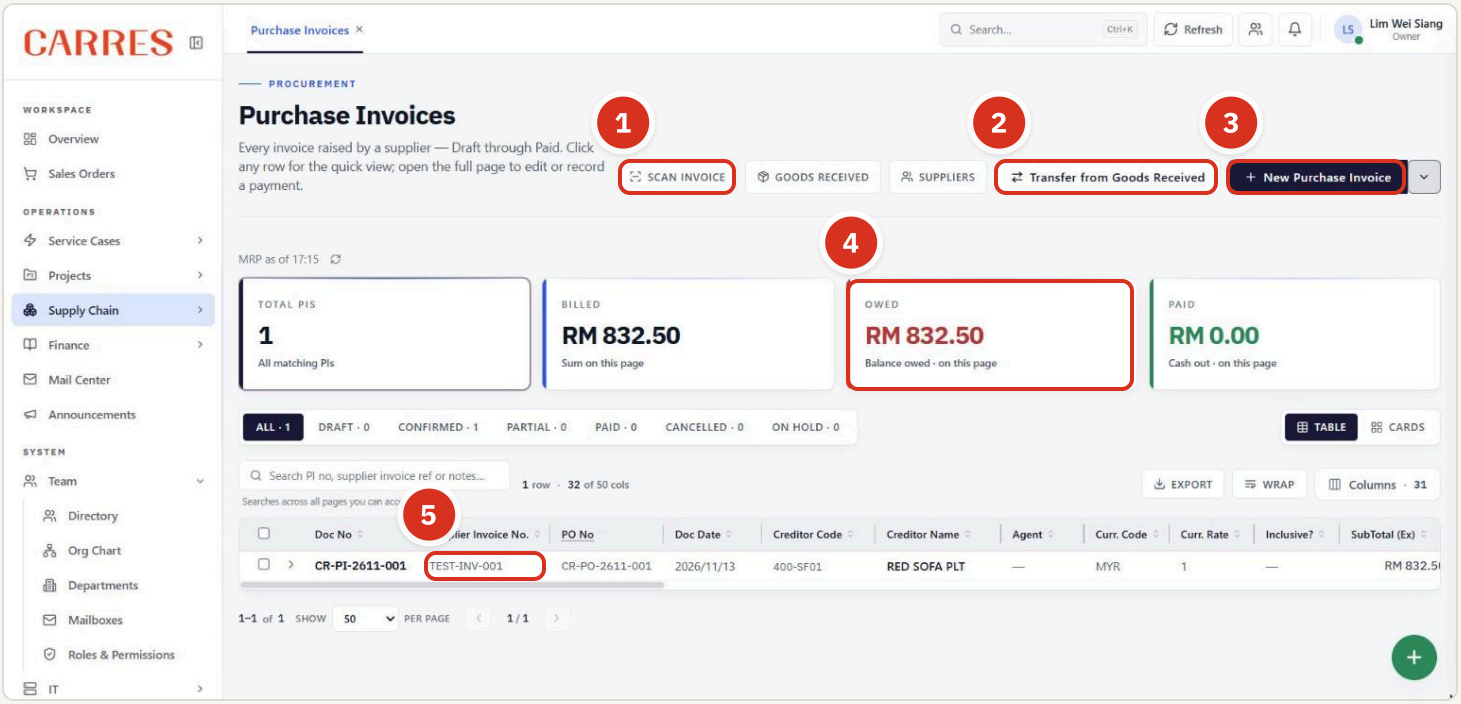

Supply Chain › Procurement › Goods Receipt

1. `Scan Delivery Order`: photograph the factory's delivery note and the system reads it.
2. `Transfer from Purchase Order` raises the GRN from the PO (most used). Quantities fill in; change only what actually arrived.
3. `New GRN` raises one by hand.
4. Awaiting PI: goods received whose supplier invoice hasn't come yet.
5. Supplier DO No: the factory's delivery note number. Fill it in; it is needed to reconcile.

Once the GRN is confirmed the goods are in stock, the SO line shows as in the warehouse, and delivery can be planned.

Purchasing, Finance

5. PI: the supplier's invoice

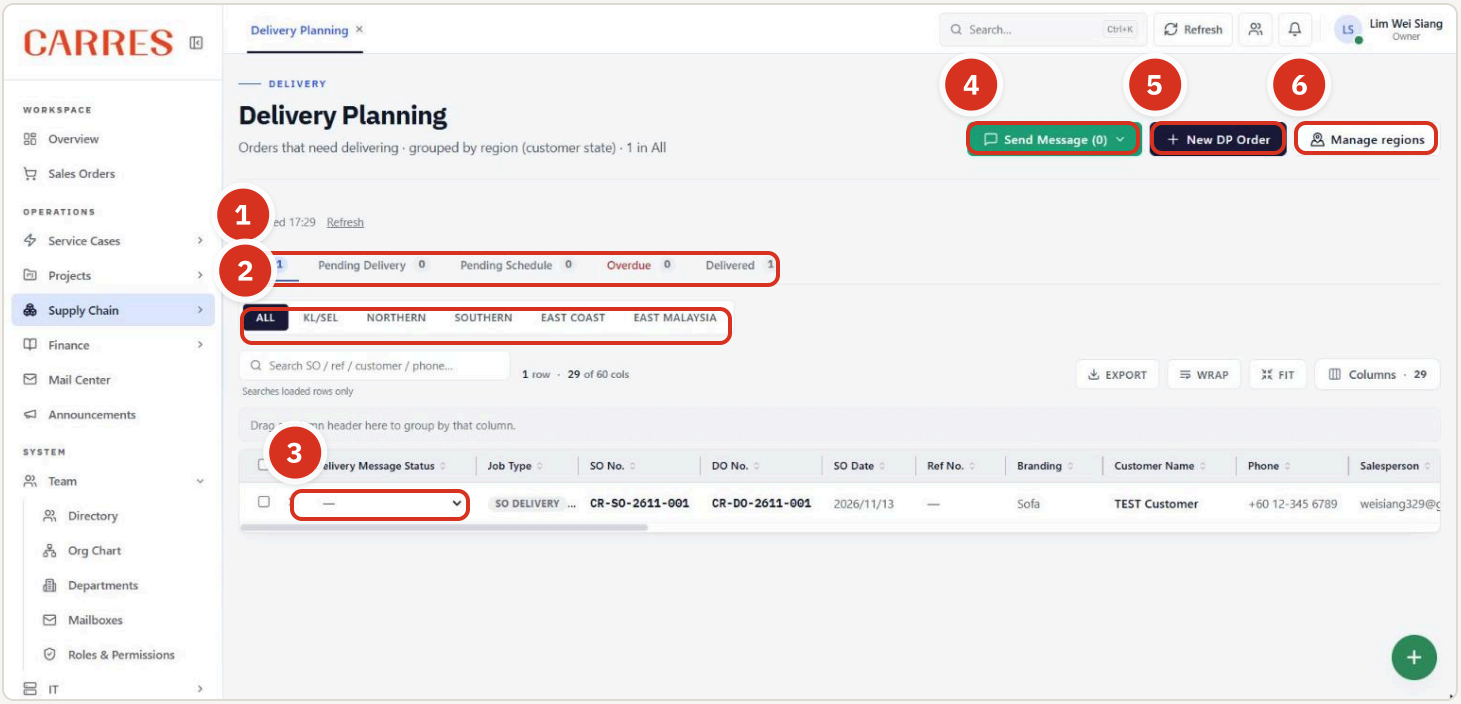

Supply Chain › Procurement › Purchase Invoices

1. `Scan Invoice`: photograph the factory's invoice.
2. `Transfer from Goods Received` raises the PI from the GRN; the amount fills in, you only check it.
3. `New Purchase Invoice` raises one by hand.
4. Owed: what we still owe suppliers.
5. Supplier Invoice No.: the factory's invoice number.

Logistics

6. Delivery Planning

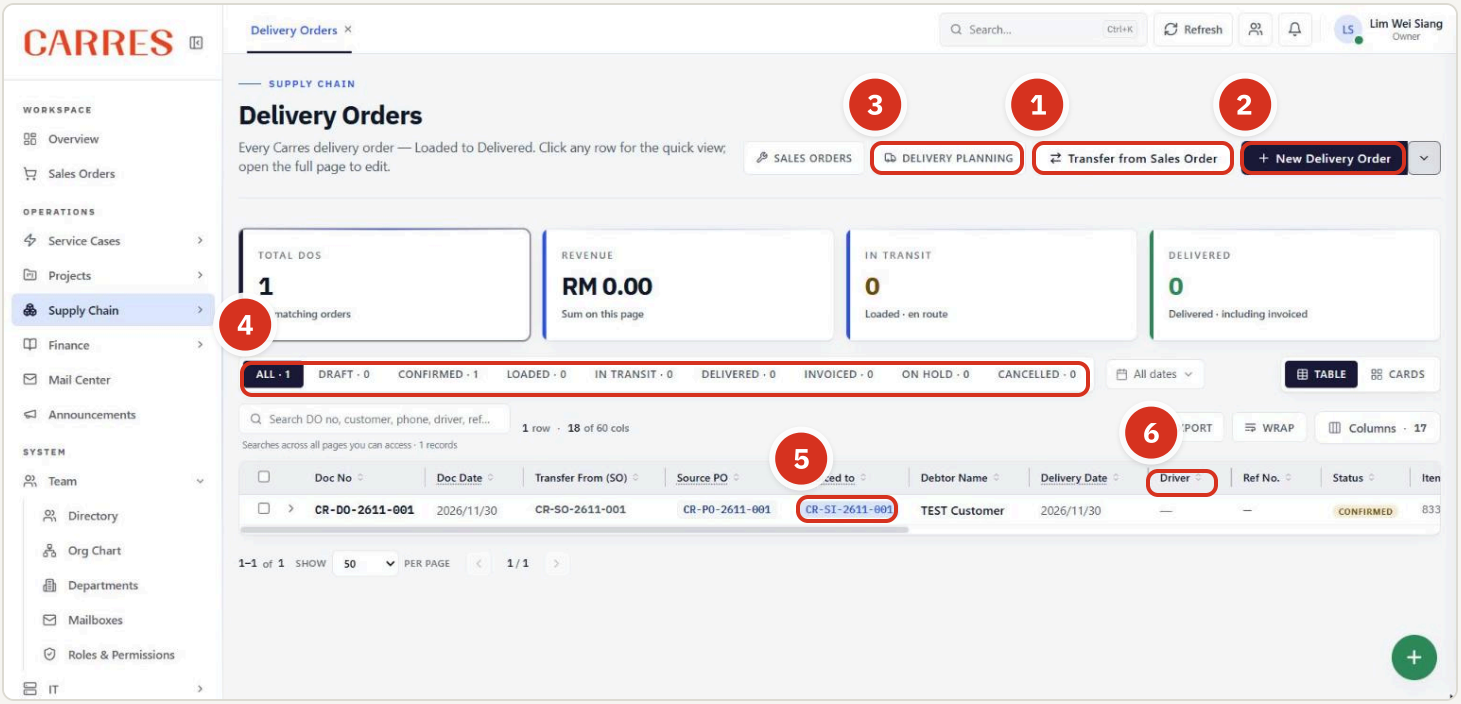

Supply Chain › Transportation › Delivery Planning

1. Pending Delivery, Pending Schedule (no date yet), Overdue, Delivered.
2. By region: KL/SEL, Northern, Southern, East Coast, East Malaysia.
3. Delivery Message Status: whether the customer has been told the delivery date.
4. `Send Message` notifies the ticked customers at once.
5. `New DP Order` raises a planning order.
6. `Manage regions` sets the regions.

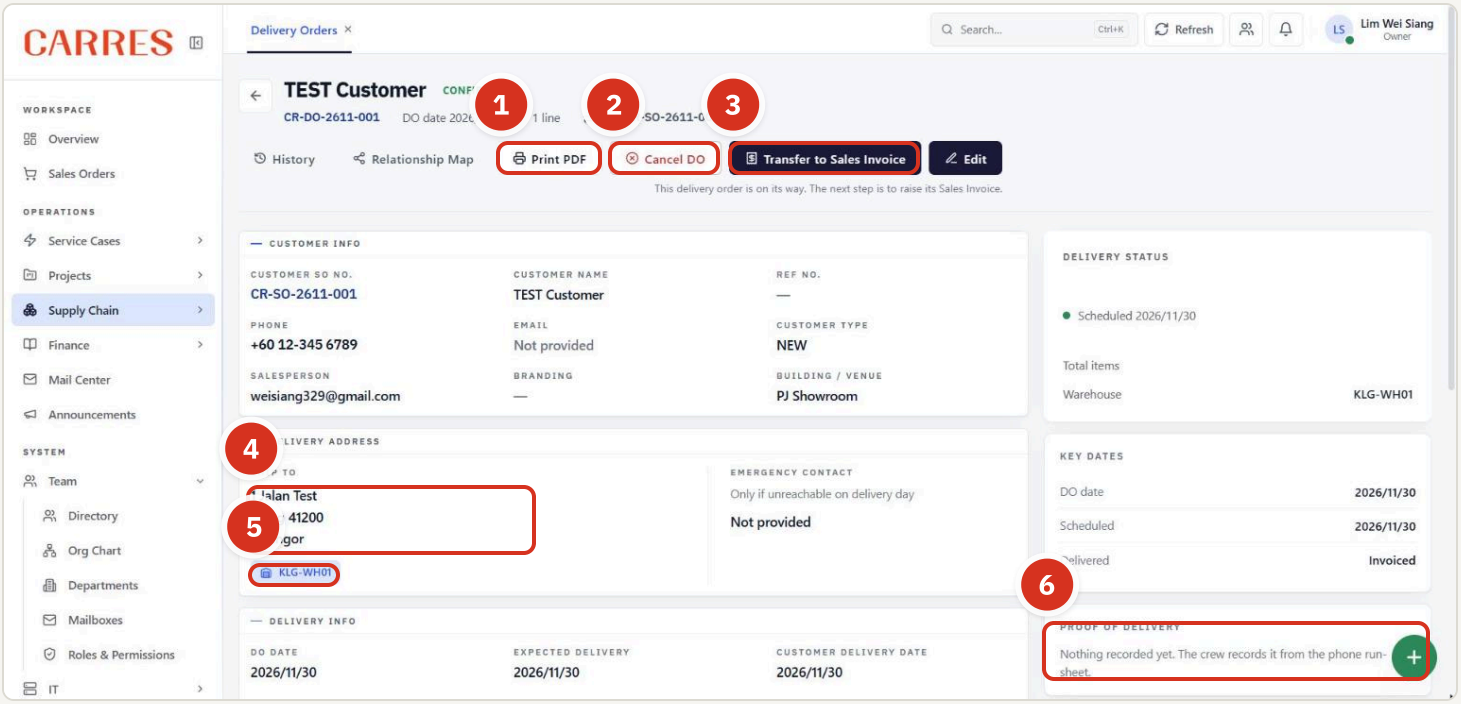

Logistics, warehouse

7. DO: the delivery order

Supply Chain › Sales Order › Delivery Orders

1. `Transfer from Sales Order` raises the DO from the SO (most used). Customer, address and items come across.
2. `New Delivery Order` raises one by hand.
3. `Delivery Planning` goes to planning.
4. Status: Draft, Confirmed, Loaded, In Transit, Delivered, Invoiced.
5. Invoiced to: the invoice raised from this DO.
6. Driver: who delivers it.

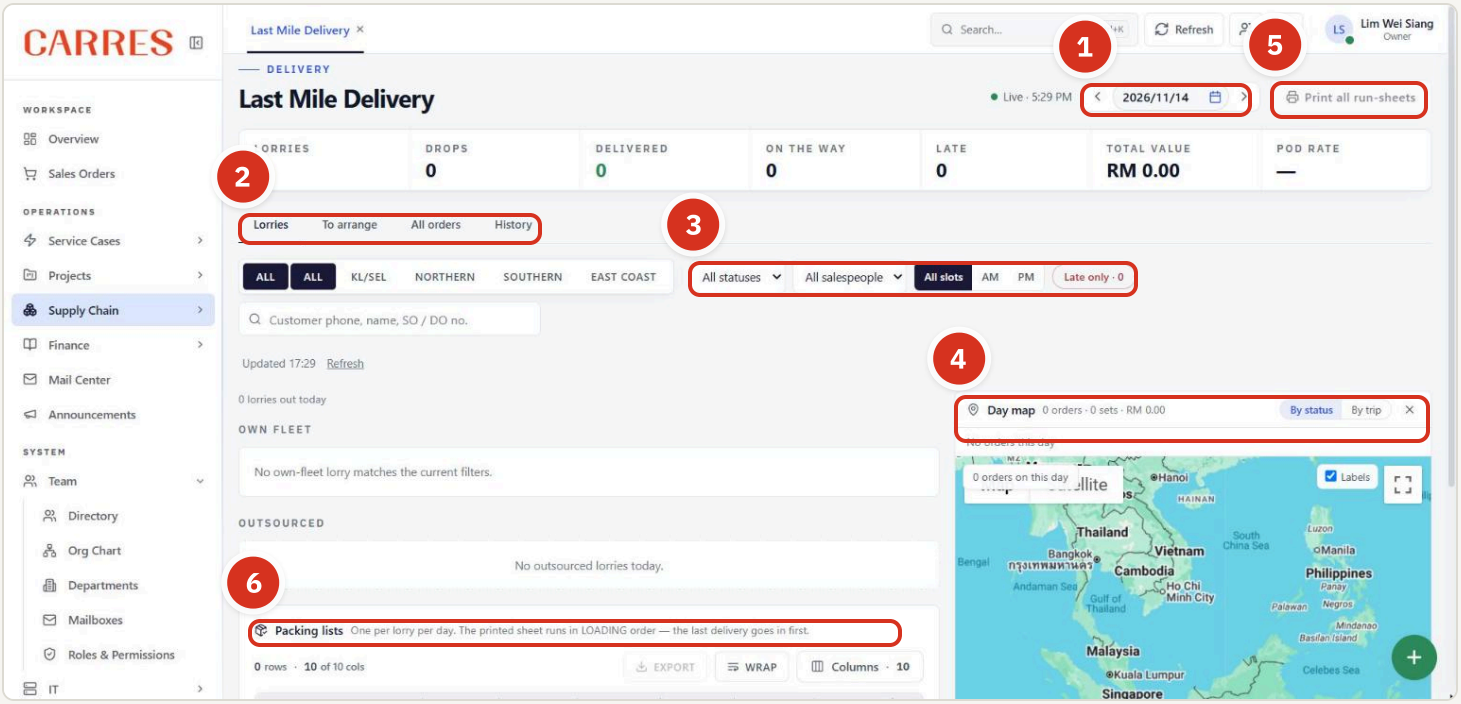

Delivery Order full page

1. `Print PDF` prints the DO for the driver.
2. `Cancel DO` cancels it.
3. `Transfer to Sales Invoice` raises the invoice after delivery.
4. Delivery address: the same two lines as the SO.
5. The warehouse it ships from.
6. Proof of Delivery: the driver's photos and the customer's signature from the phone appear here.

Logistics

8. Last Mile Delivery: today's lorries

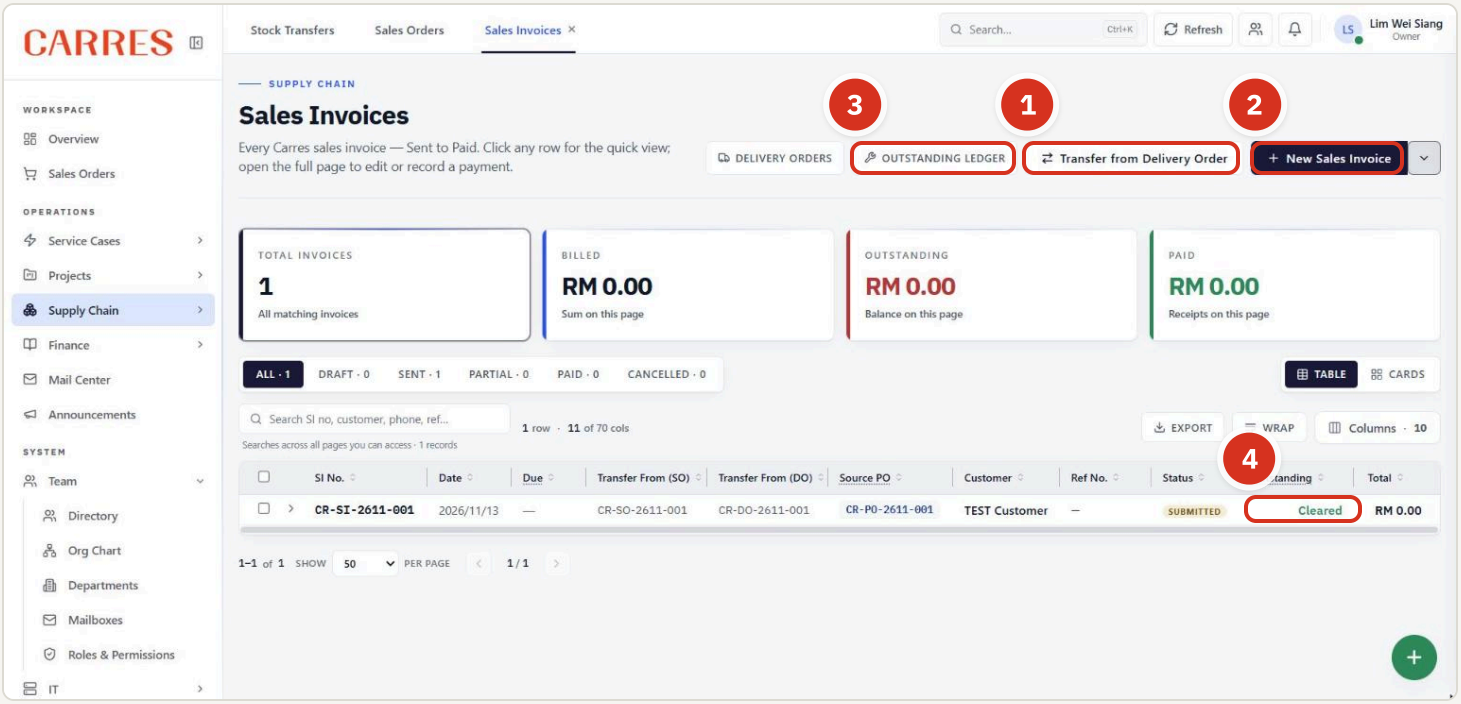

Supply Chain › Transportation › Last Mile Delivery

1. Pick the date.
2. Lorries, To arrange (not on a lorry yet), All orders, History.
3. Filter by region, status, salesperson, AM / PM, late only.
4. Map: every drop today.
5. `Print all run-sheets` prints every driver's route sheet.
6. Packing lists: what each lorry loads, last drop loaded first.

Finance

9. SI: invoice the customer

Supply Chain › Sales Order › Sales Invoices

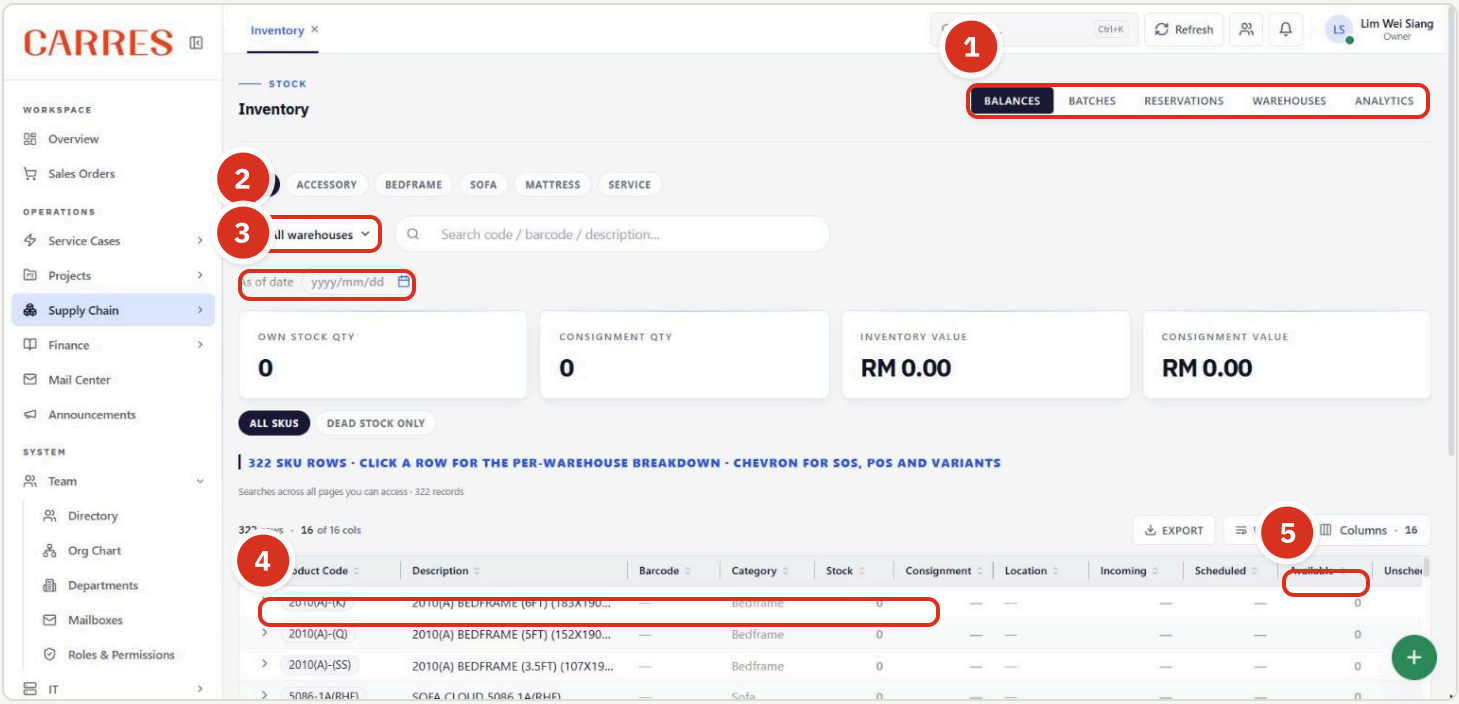

1. `Transfer from Delivery Order` raises the invoice from the DO (most used).
2. `New Sales Invoice` raises one by hand.
3. `Outstanding Ledger` shows what each customer still owes.
4. Outstanding: what is still owed on this invoice; **Cleared** = fully paid.

Customers pay the company directly. What is still owed shows as Balance on the SO and in the Outstanding Ledger.

ALWAYS KNOW WHERE THINGS STAND

Warehouse, purchasing, sales

Stock

Supply Chain › Warehouse › Inventory

1. Balances (stock on hand), Batches, Reservations (held for orders), Warehouses, Analytics.
2. One warehouse only.
3. As of date: stock on a given day.
4. Press a row for how many are in each warehouse; the arrow on the left shows the SOs and POs using it.
5. Available: what can still be sold after reservations.

Moving goods between warehouses: `Warehouse › Transfers`, **New Transfer**, pick from and to. Stock moves the moment it is confirmed, and moves back if cancelled. Counting: `Warehouse › Stock Take`. Wrong quantity: `Warehouse › Adjustments`.

Everyone

Where to look every day

Who	Look at	For
Salesperson	Sales Orders	Drafts still open; whether 50% deposit is in
Operation	Sales Orders › In Production, Ready to Ship	Orders ready to plan for delivery
Purchasing	MRP (Only shortages), Purchase Orders › Outstanding	POs to raise; whether factories deliver on time
Warehouse	Goods Receipt, Last Mile › Packing lists	Goods arriving today; lorries to load today
Logistics	Delivery Planning › Pending Schedule, Overdue	Orders without a date and overdue ones
Finance	Purchase Invoices › Owed, Sales Invoices › Outstanding	Money owed to suppliers; money customers still owe
Management	Team › Directory › Needs attention	Staff who never signed in or have no department

EVERY MENU PAGE

Reference

Workspace

Every page in the left menu, in the same order as the menu. For each page: what it is for, the tabs and buttons on it, and every column its list can show. Columns not shown by default are switched on with **Columns** (top right of the list); the groups below are the groups in that panel.

Every list also has: search, **Export** (Excel), **Wrap** (long text on more lines), **Columns**, and pressing a row to open its quick view.

Menu	What it is for	Tabs and buttons	Columns
Overview	Your day: items that need you, SLA risks, pending reviews, project sales, POs not received, open cases, active projects, and where the business needs attention.	View tasks	No column list (this page is a board, form or report).
Sales Orders	Shortcut to the Sales Orders list (same page as Supply Chain › Sales Order › Sales Orders).	—	see Supply Chain › Sales Order › Sales Orders
